

Introduction to Computer Graphics

AMES101, Lingqi Yan, UC Santa Barbara

Lecture 9: Shading 3 (Texture Mapping cont.)

Announcements

- About homework
 - Homework 1 is being graded
 - Homework 2
 - 271 submissions so far
 - Homework 3 will be released soon

Last Lectures

- Shading 1 & 2
 - Blinn-Phong reflectance model
 - Shading models / frequencies
 - Graphics Pipeline
 - Texture mapping

Today

- Shading 3
 - Barycentric coordinates
 - Texture queries
 - Applications of textures
- Shadow mapping

Interpolation Across Triangles: Barycentric Coordinates

(重心坐标)

Interpolation Across Triangles

Why do we want to interpolate?

- Specify values **at vertices**
- Obtain smoothly varying values **across triangles**

What do we want to interpolate?

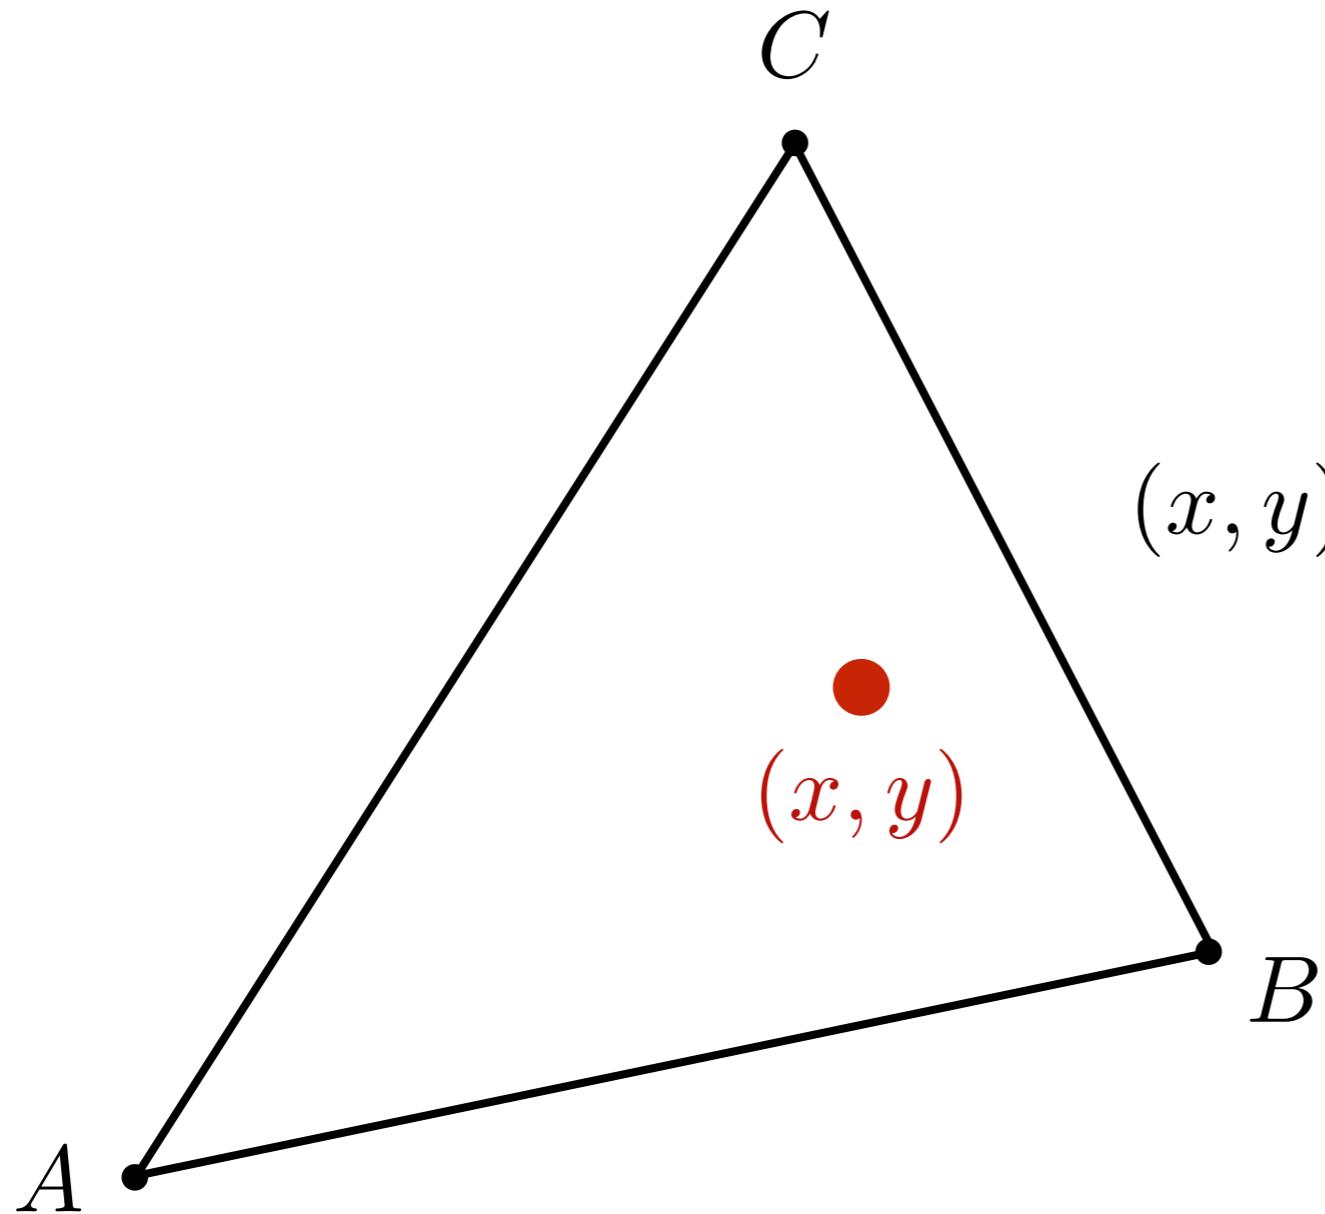

- Texture coordinates, colors, normal vectors, ...

How do we interpolate?

- **Barycentric coordinates**

Barycentric Coordinates

A coordinate system for triangles (α, β, γ)

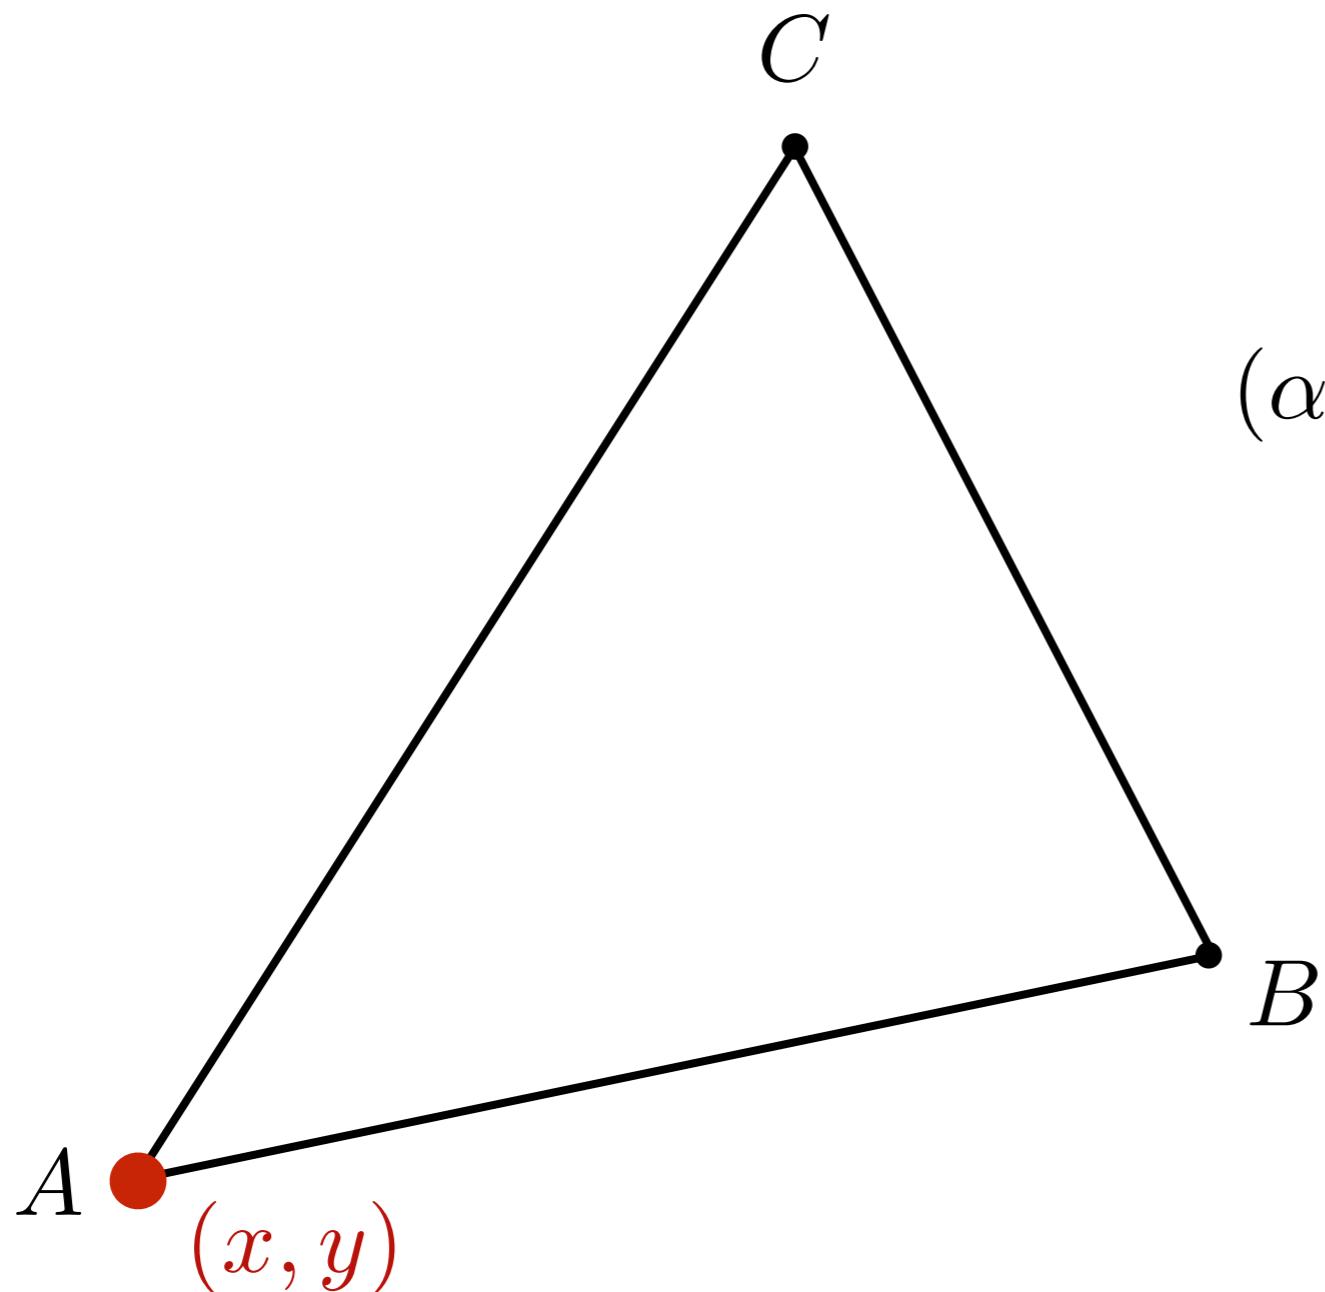

$$(x, y) = \alpha A + \beta B + \gamma C$$

$$\alpha + \beta + \gamma = 1$$

**Inside the triangle if
all three coordinates
are non-negative**

Barycentric Coordinates

What's the barycentric coordinate of A?

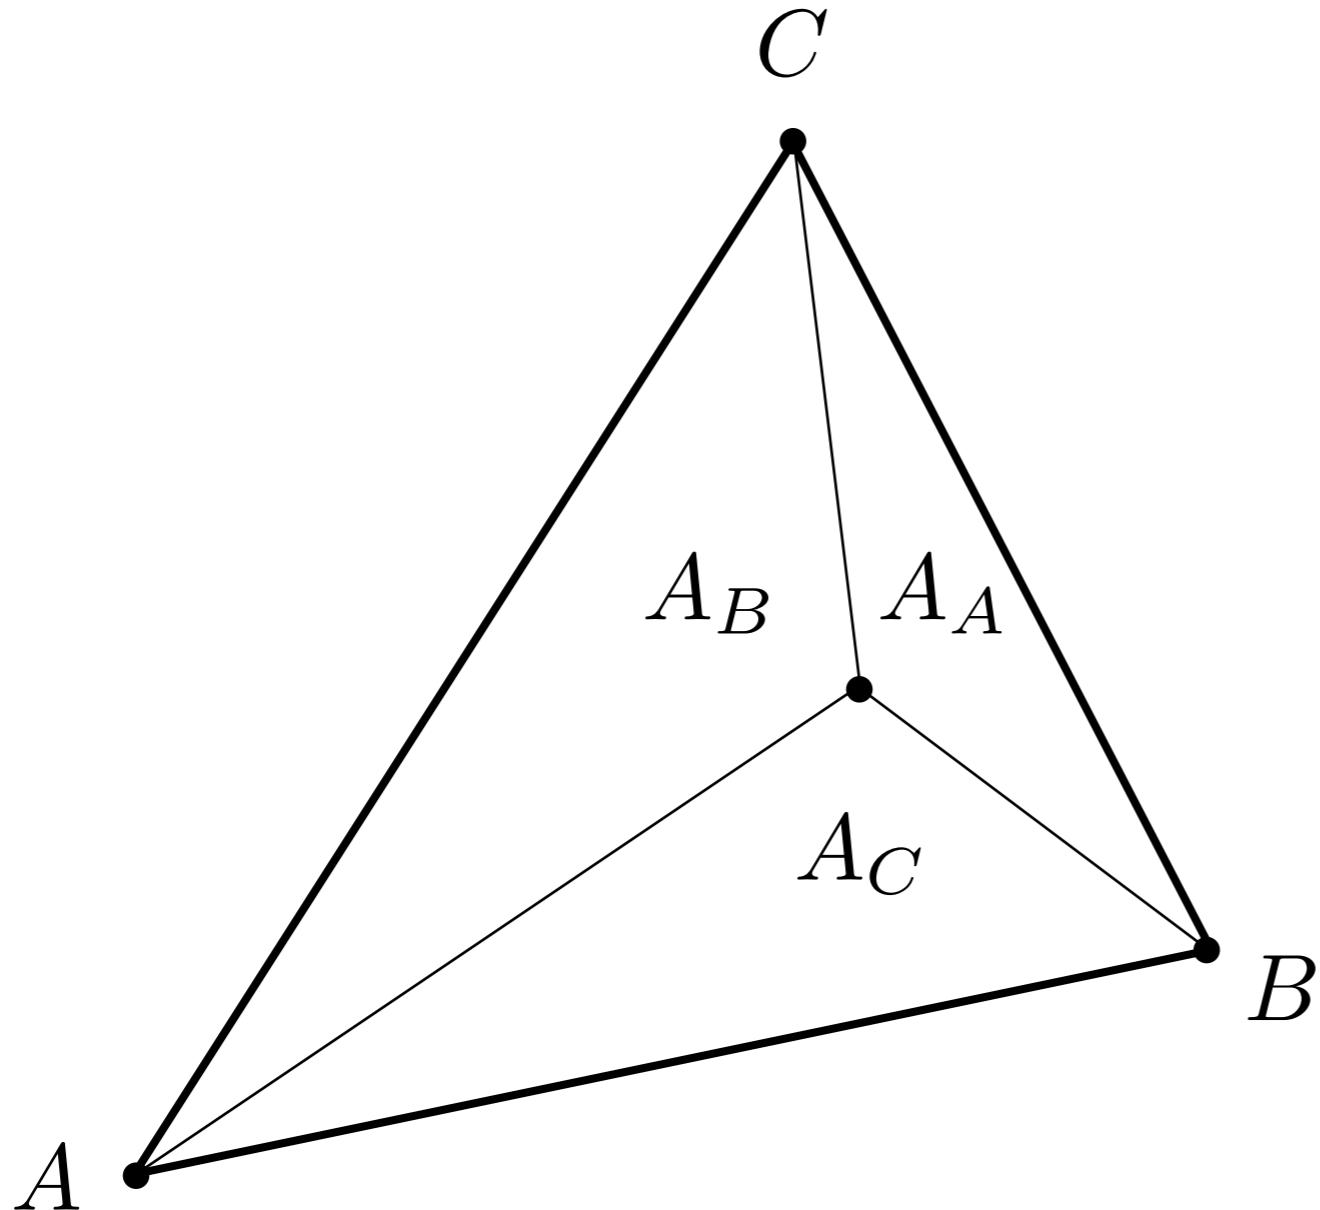

$$(\alpha, \beta, \gamma) = (1, 0, 0)$$

$$\begin{aligned}(x, y) &= \alpha A + \beta B + \gamma C \\ &= A\end{aligned}$$

Barycentric Coordinates

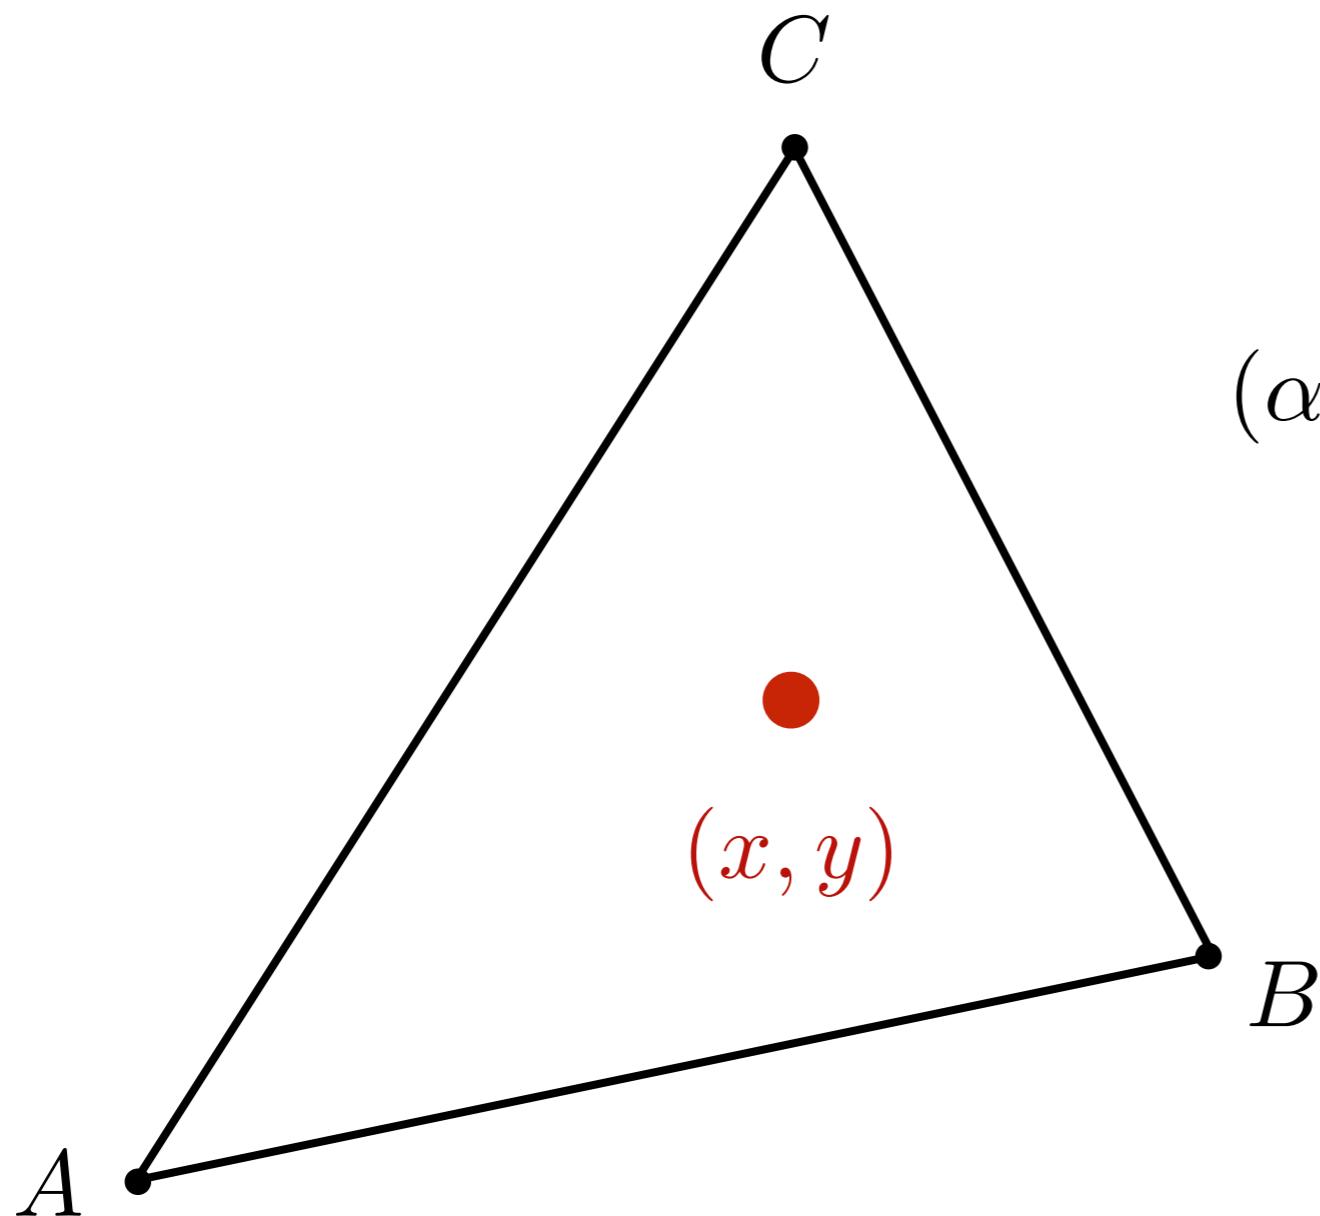

Geometric viewpoint — proportional areas

$$\alpha = \frac{A_A}{A_A + A_B + A_C}$$
$$\beta = \frac{A_B}{A_A + A_B + A_C}$$
$$\gamma = \frac{A_C}{A_A + A_B + A_C}$$

Barycentric Coordinates

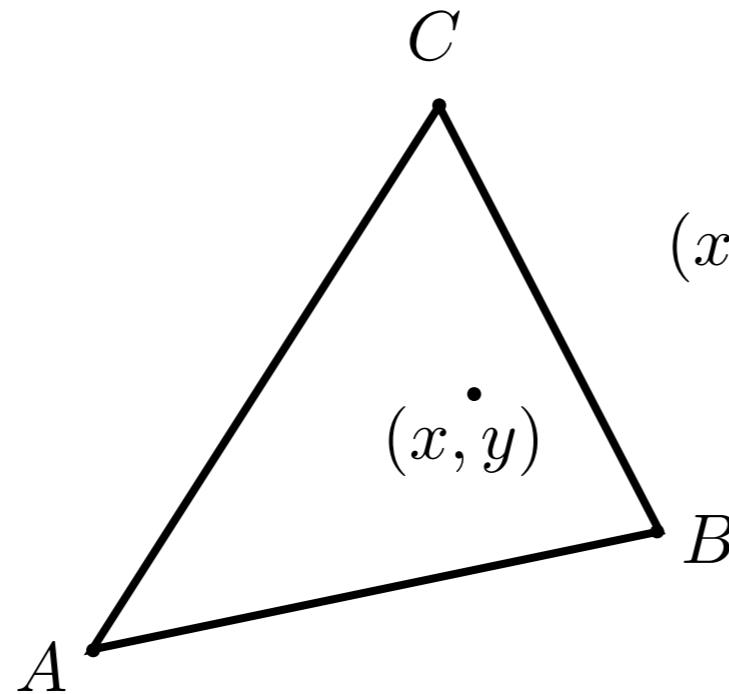

What's the barycentric coordinate of the centroid?

$$(\alpha, \beta, \gamma) = \left(\frac{1}{3}, \frac{1}{3}, \frac{1}{3} \right)$$

$$(x, y) = \frac{1}{3} A + \frac{1}{3} B + \frac{1}{3} C$$

Barycentric Coordinates: Formulas

$$(x, y) = \alpha A + \beta B + \gamma C$$

$$\alpha + \beta + \gamma = 1$$

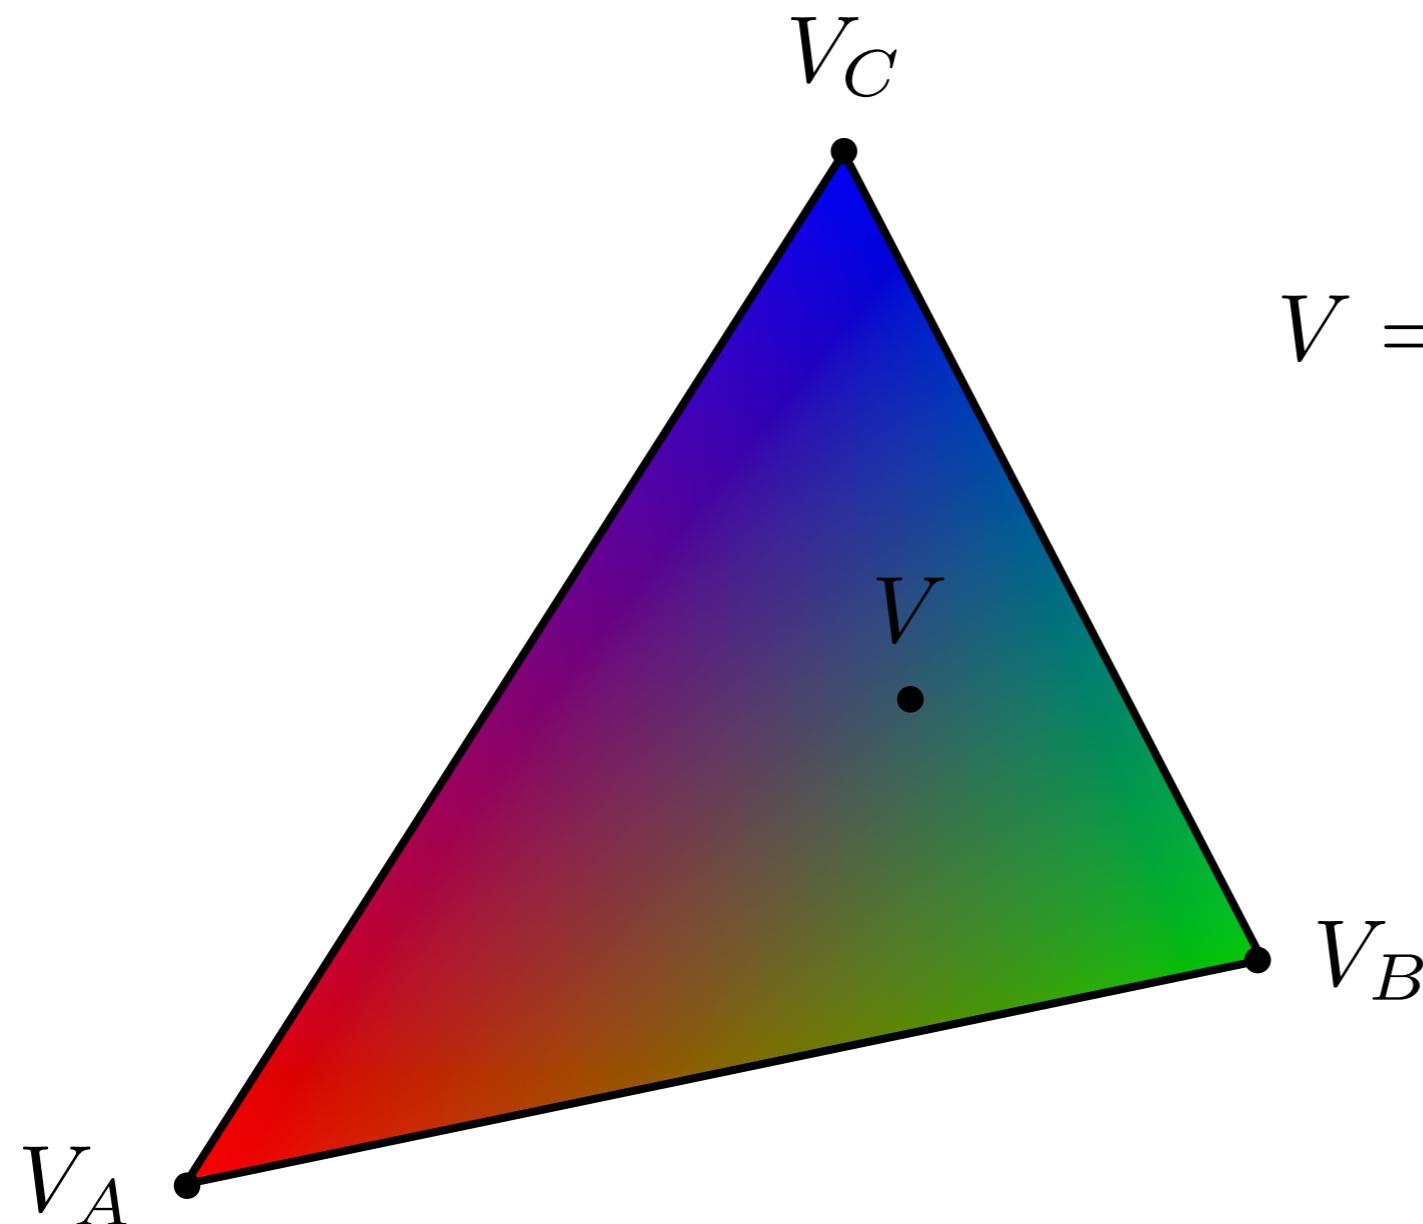

$$\alpha = \frac{-(x - x_B)(y_C - y_B) + (y - y_B)(x_C - x_B)}{-(x_A - x_B)(y_C - y_B) + (y_A - y_B)(x_C - x_B)}$$

$$\beta = \frac{-(x - x_C)(y_A - y_C) + (y - y_C)(x_A - x_C)}{-(x_B - x_C)(y_A - y_C) + (y_B - y_C)(x_A - x_C)}$$

$$\gamma = 1 - \alpha - \beta$$

Using Barycentric Coordinates

Linearly interpolate values at vertices

$$V = \alpha V_A + \beta V_B + \gamma V_C$$

V_A, V_B, V_C can be positions, texture coordinates, color, normal, depth, material attributes...

However, barycentric coordinates are not invariant under projection!

Applying Textures

Simple Texture Mapping: Diffuse Color

for each rasterized screen sample (x, y) :

$(u, v) = \text{evaluate texture coordinate at } (x, y)$

`texcolor = texture.sample(u, v);`

set sample's color to texcolor;

Usually the diffuse albedo K_d
(recall the Blinn-Phong reflectance model)

Usually a pixel's center

Using barycentric
coordinates!

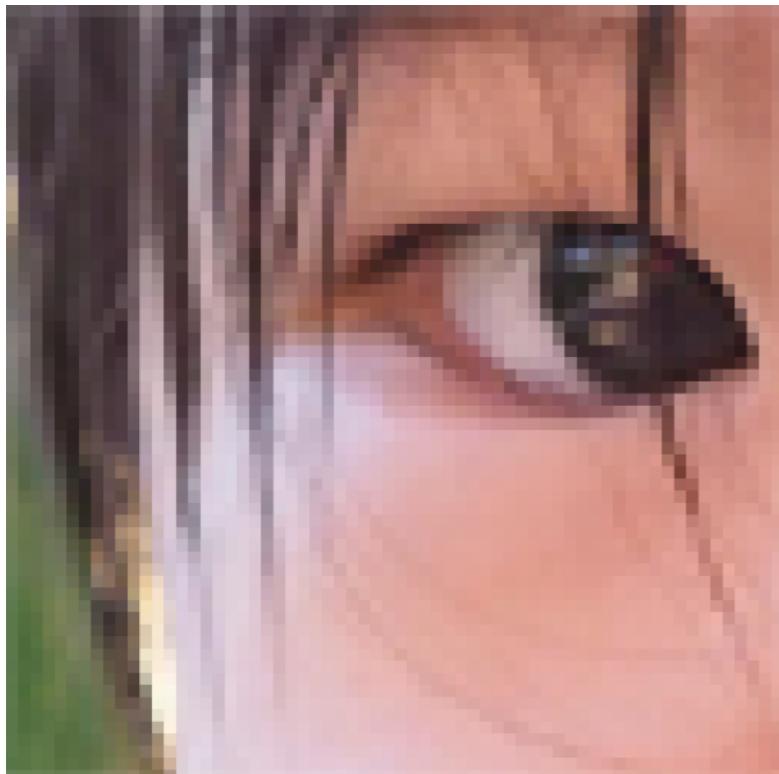

Texture Magnification

(What if the texture is too small?)

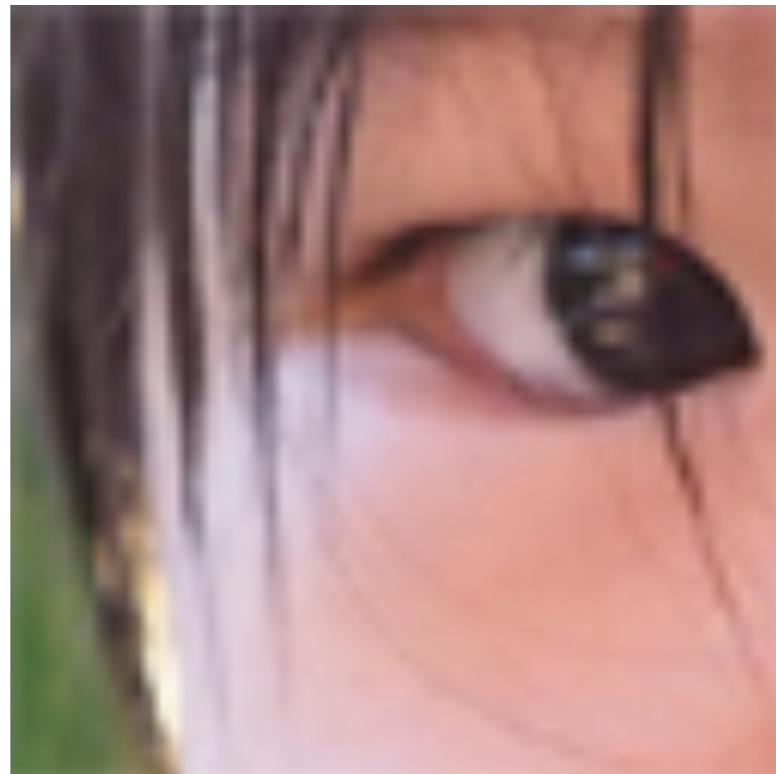

Texture Magnification - Easy Case

Generally don't want this — insufficient texture resolution

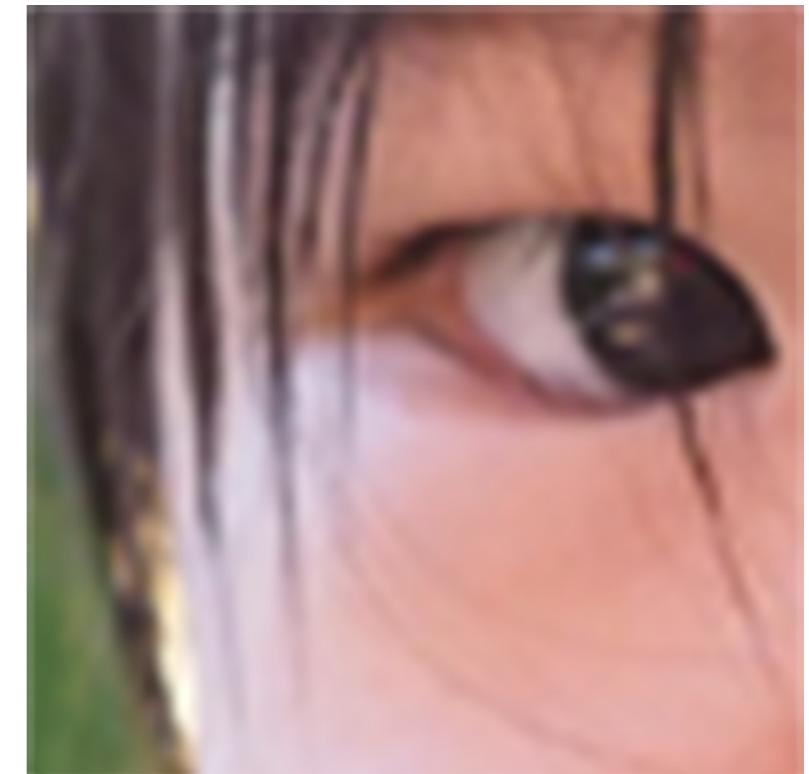

A pixel on a texture — a **texel** (纹理元素、纹素)

Nearest

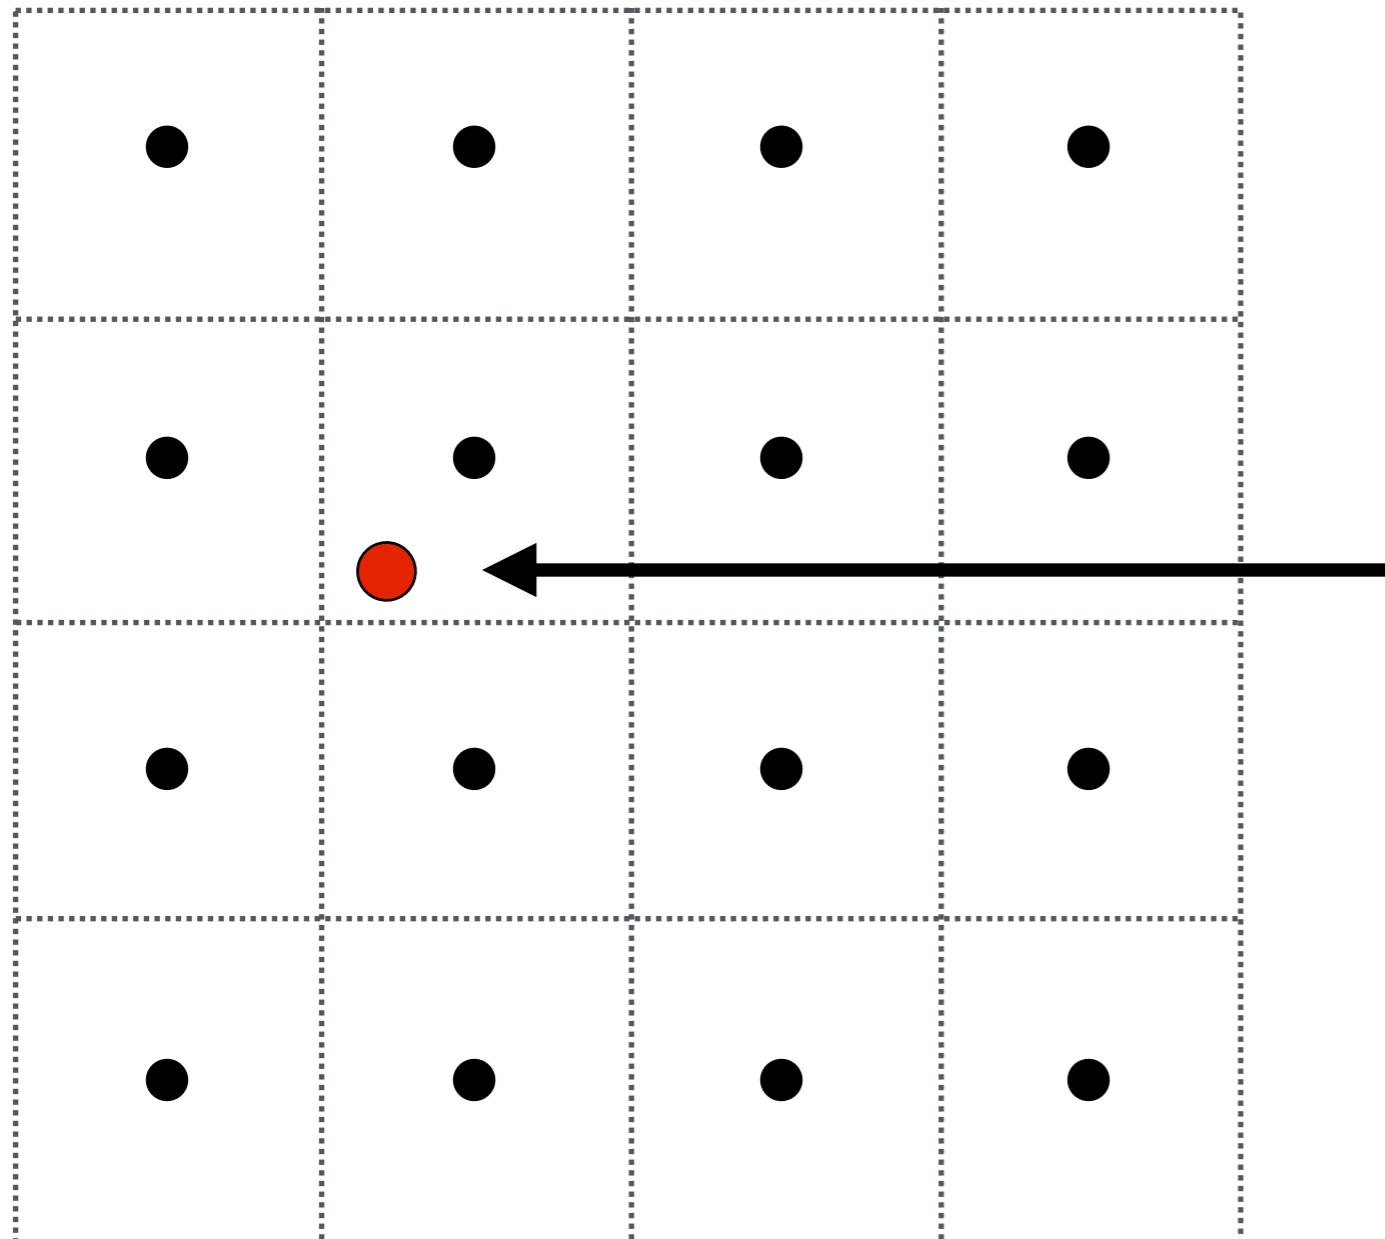

Bilinear

Bicubic

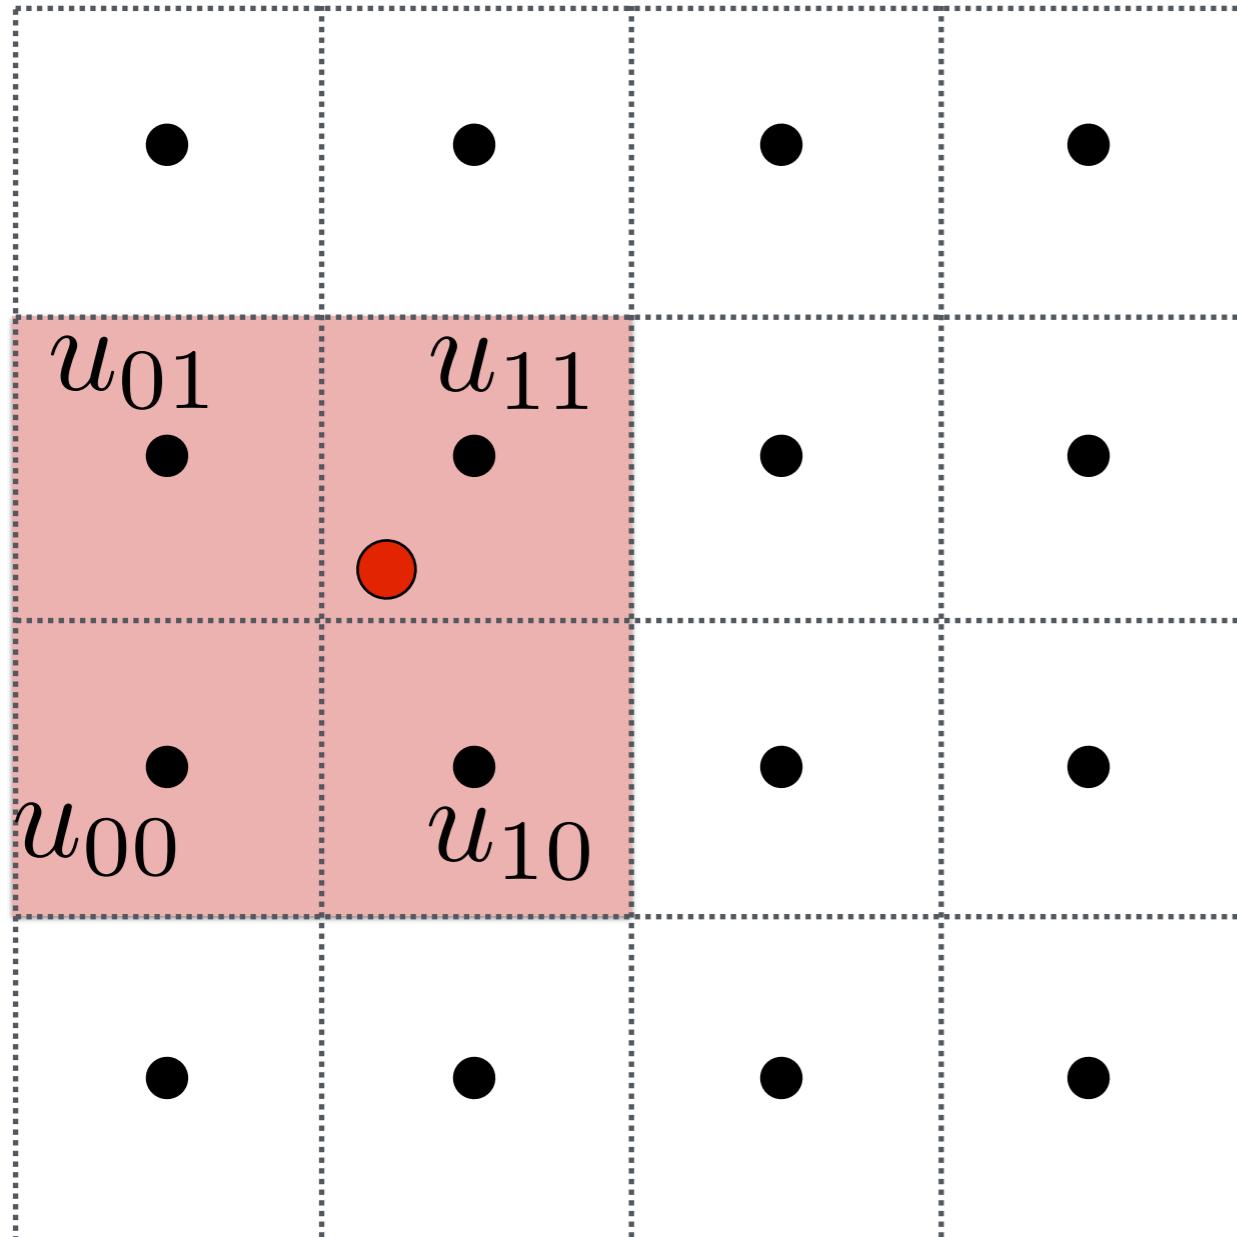

Bilinear Interpolation

Want to sample
texture value $f(x,y)$ at
red point

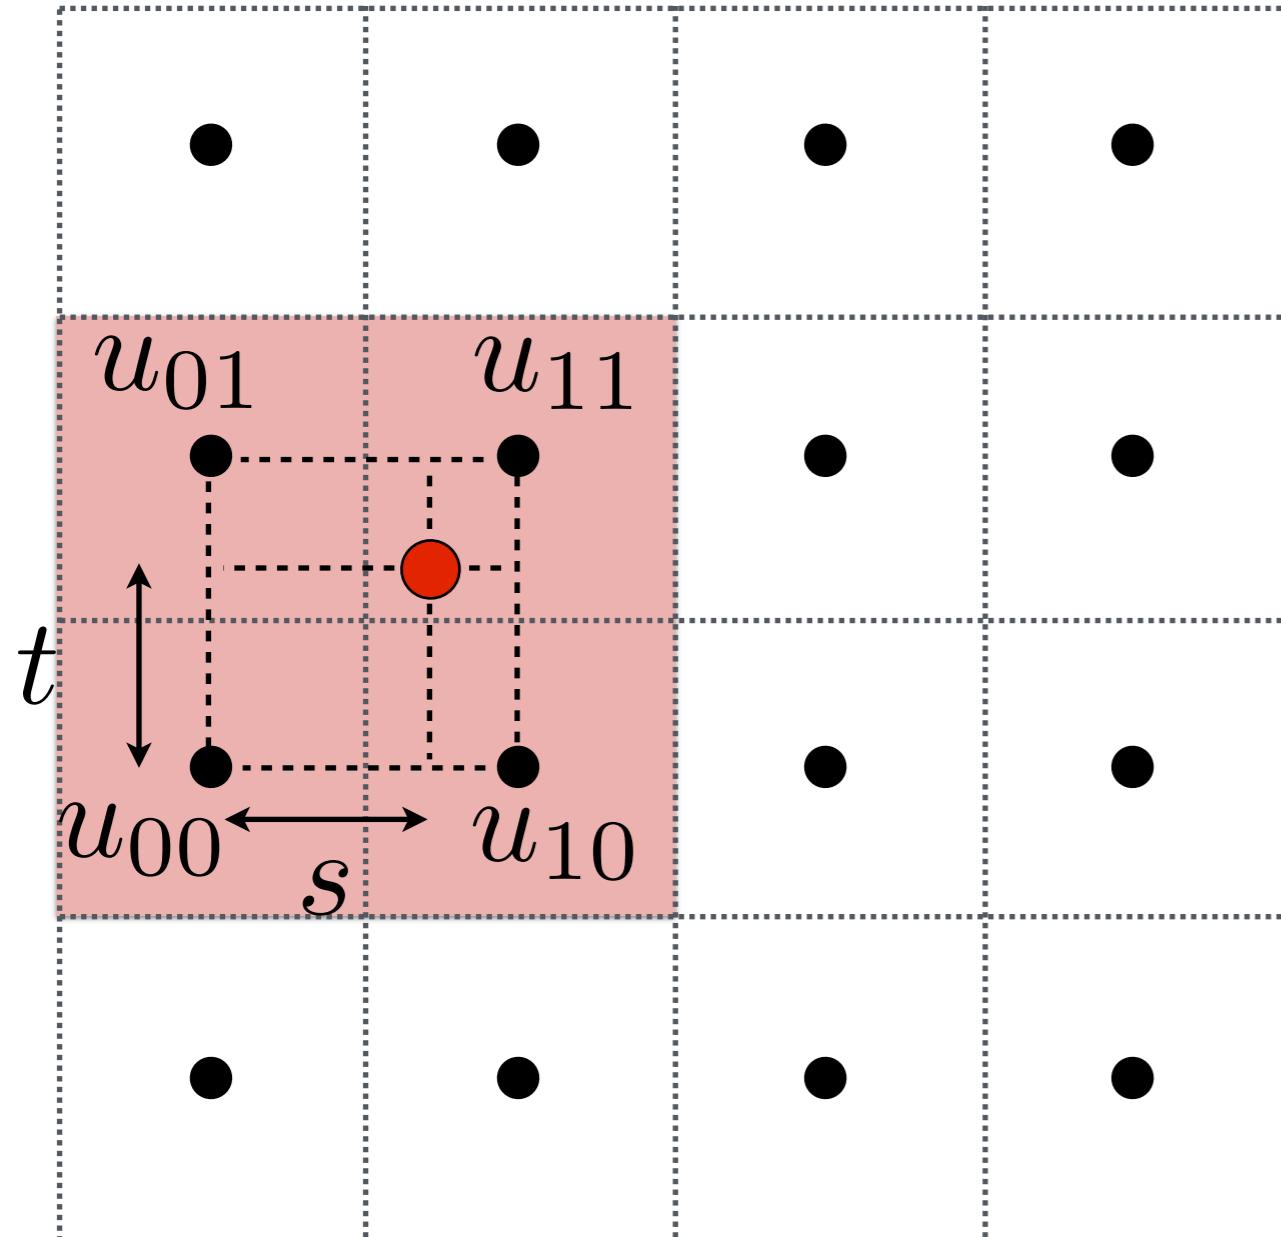

Black points indicate
texture sample
locations

Bilinear Interpolation

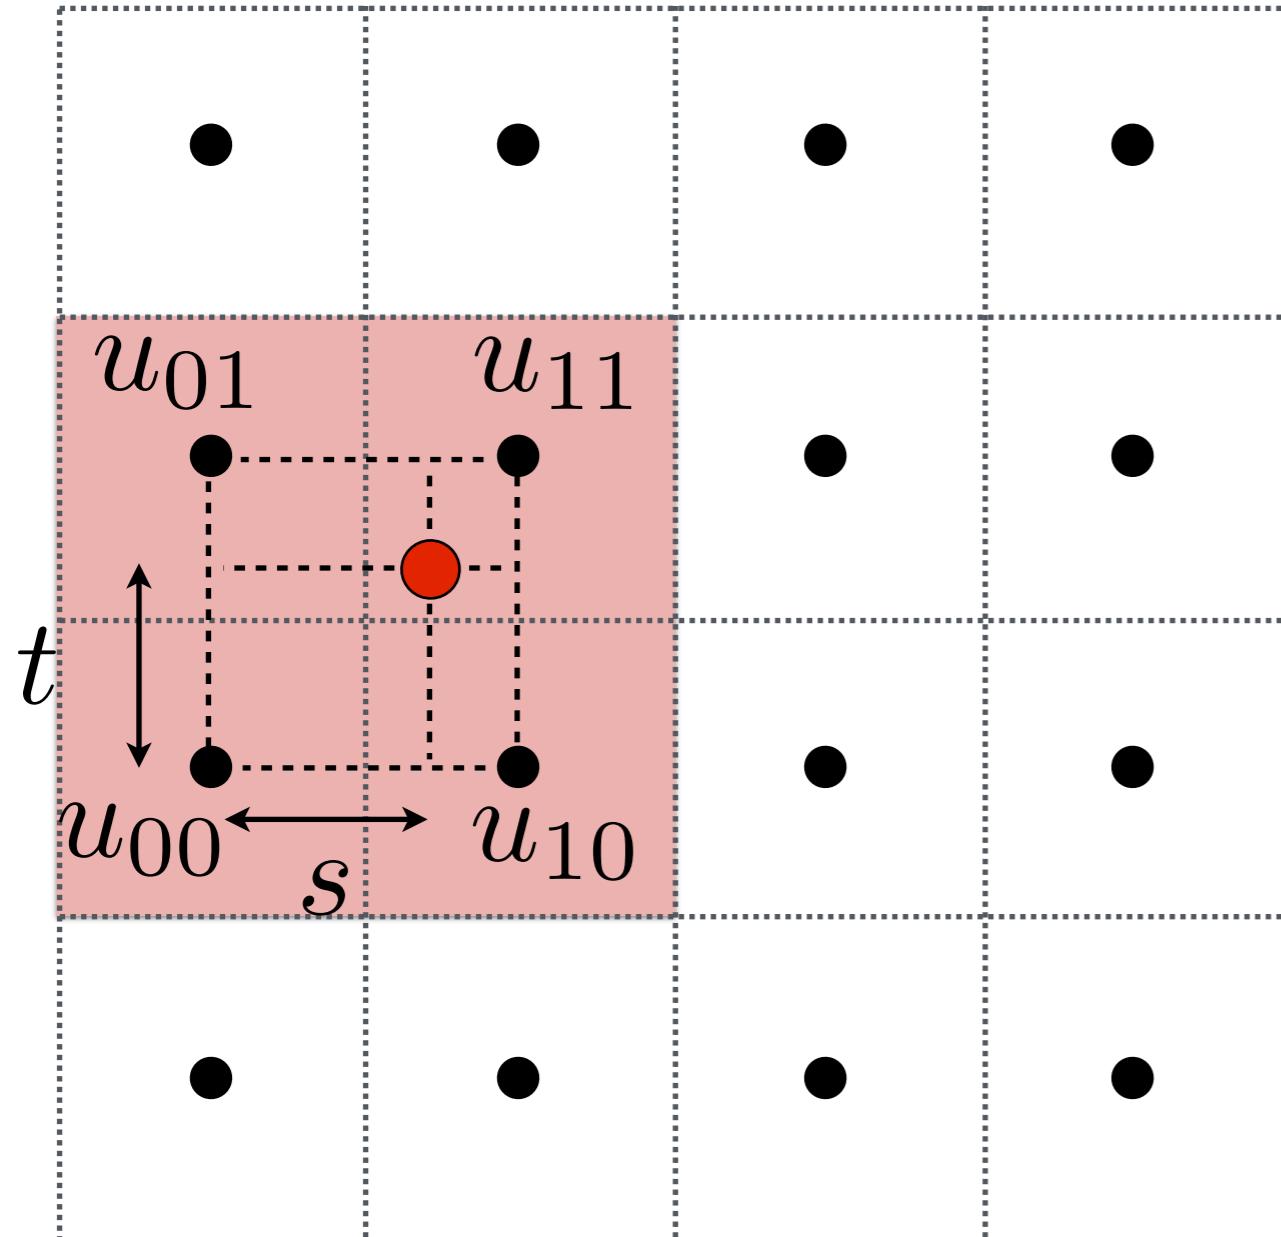

Take 4 nearest sample locations, with texture values as labeled.

Bilinear Interpolation

And fractional offsets,
(s, t) as shown

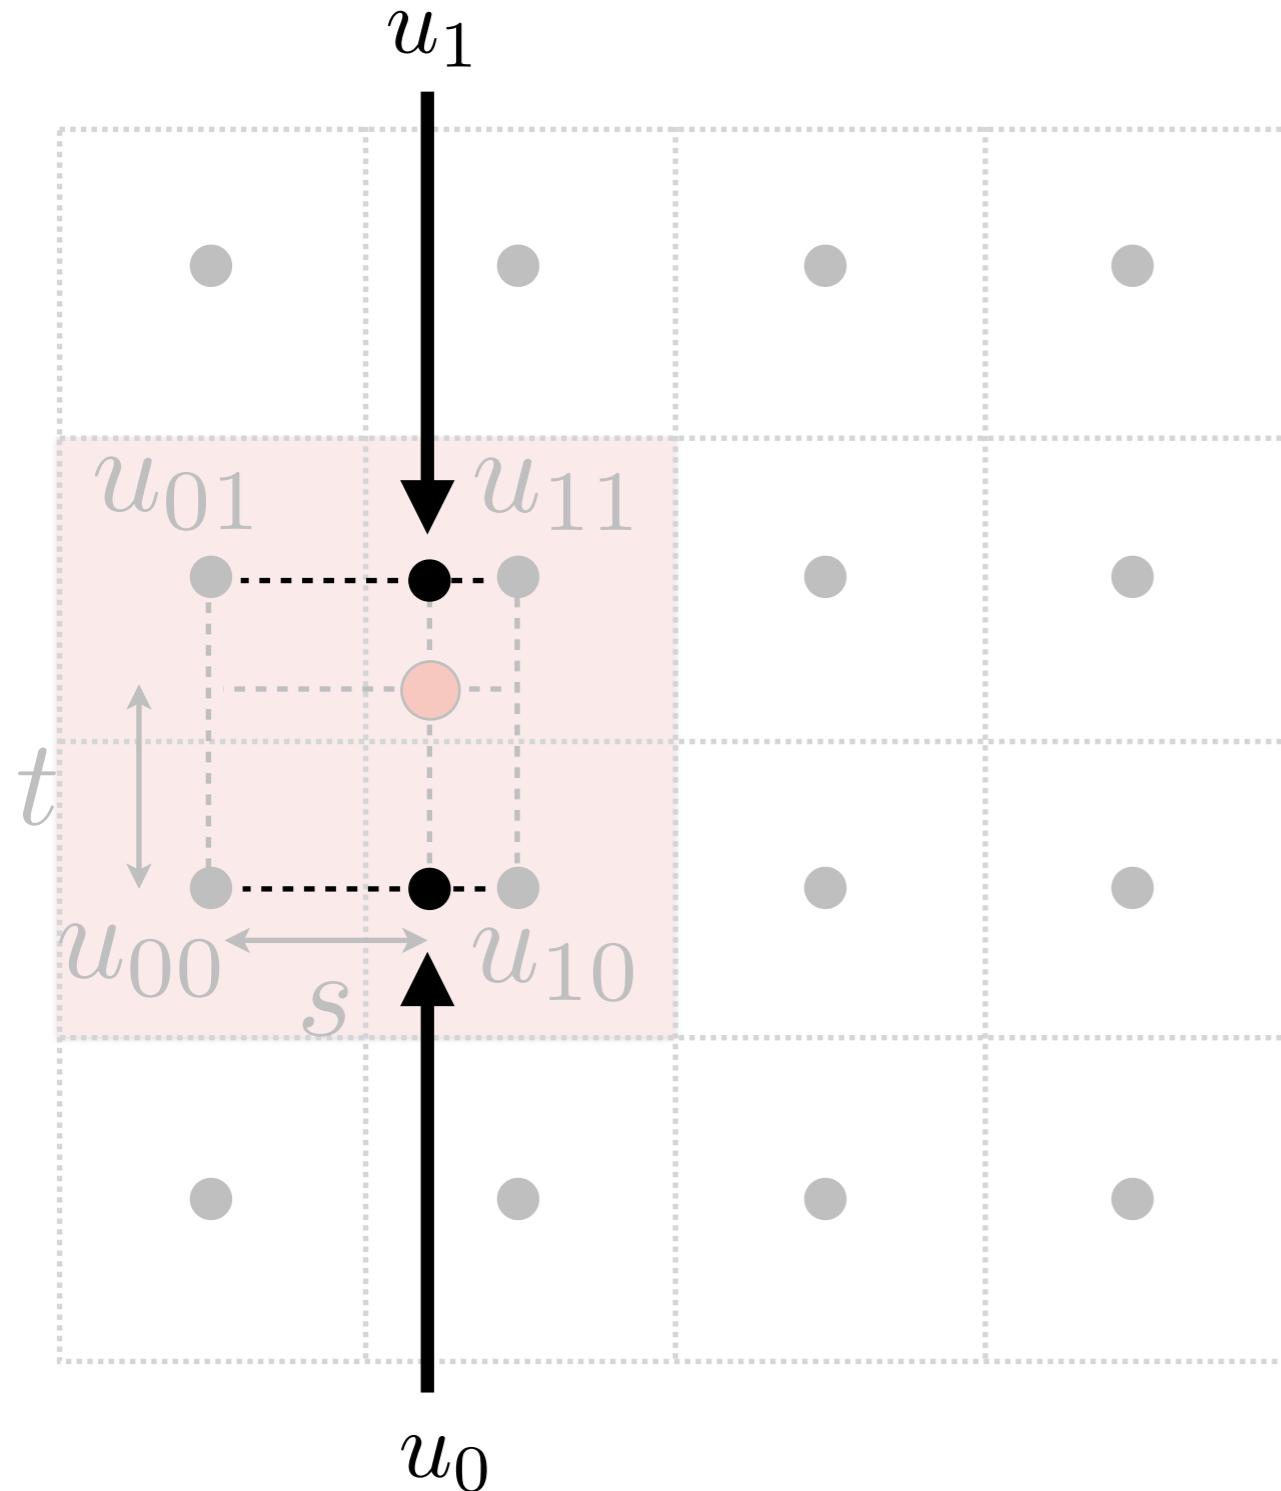

Bilinear Interpolation

Linear interpolation (1D)

$$\text{lerp}(x, v_0, v_1) = v_0 + x(v_1 - v_0)$$

Bilinear Interpolation

Linear interpolation (1D)

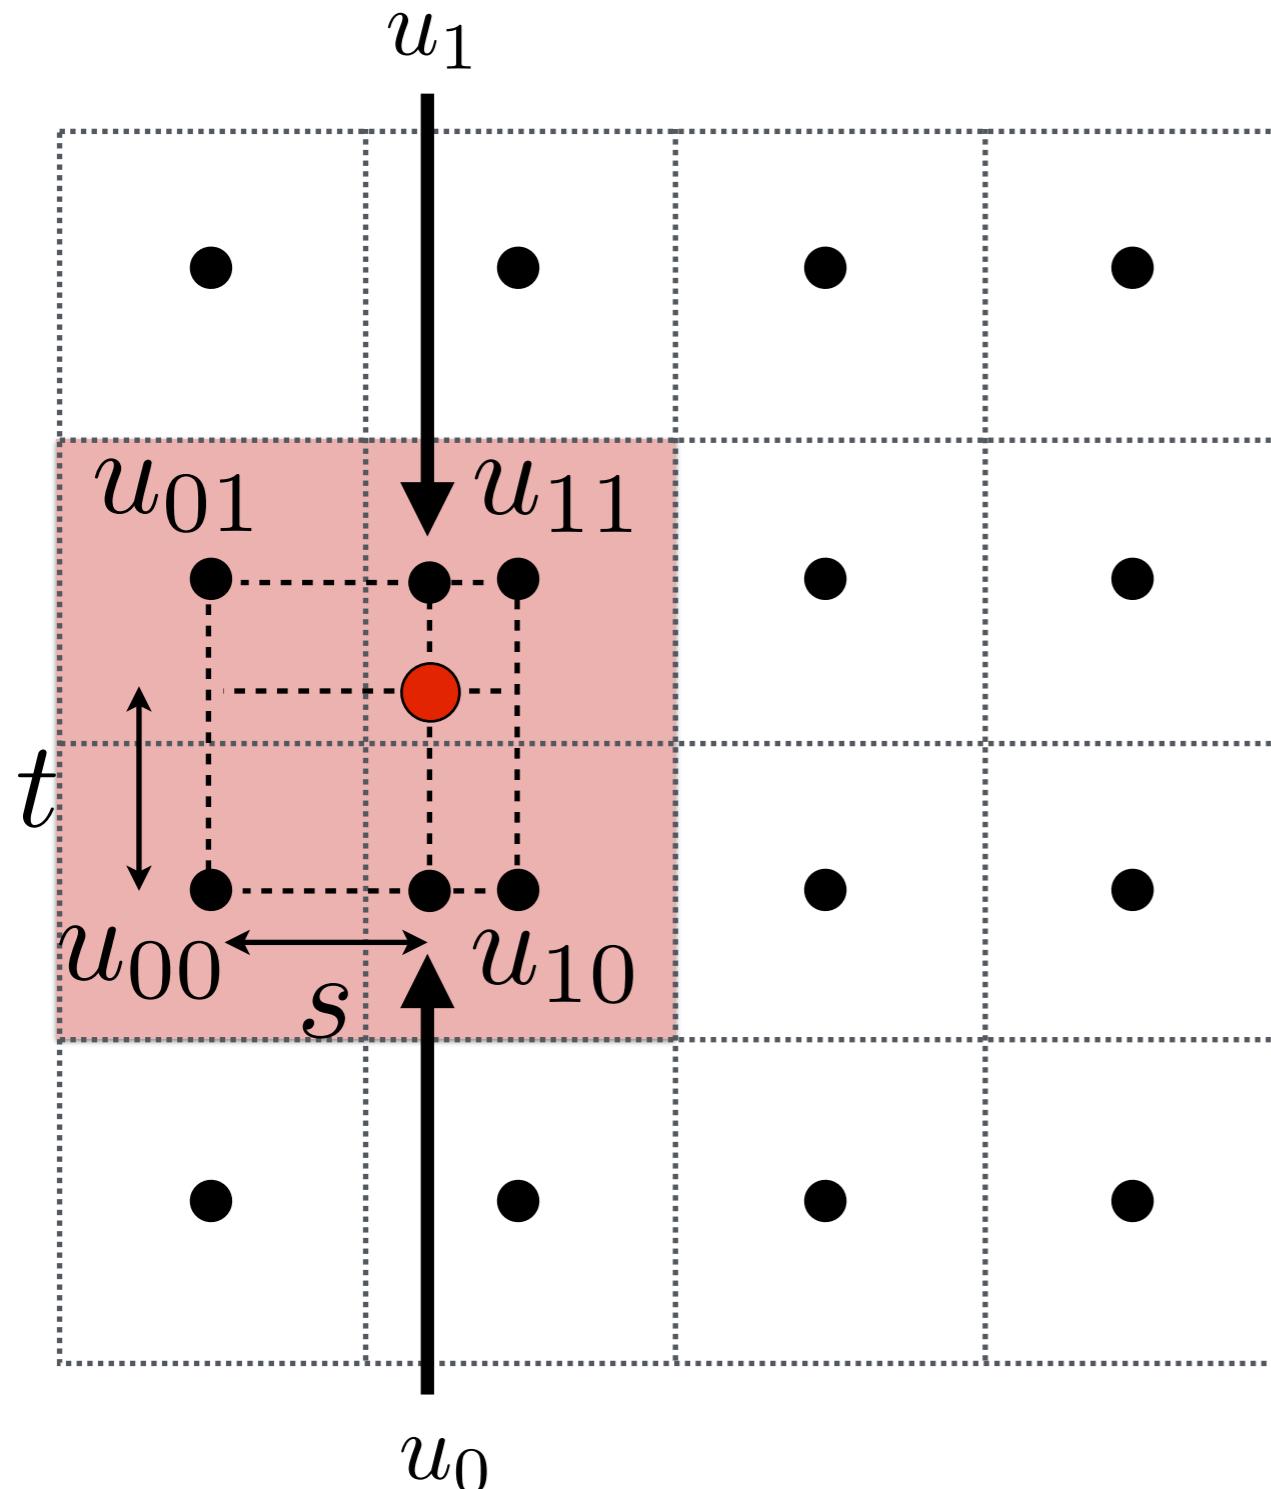

$$\text{lerp}(x, v_0, v_1) = v_0 + x(v_1 - v_0)$$

Two helper lerps (horizontal)

$$u_0 = \text{lerp}(s, u_{00}, u_{10})$$

$$u_1 = \text{lerp}(s, u_{01}, u_{11})$$

Bilinear Interpolation

Linear interpolation (1D)

$$\text{lerp}(x, v_0, v_1) = v_0 + x(v_1 - v_0)$$

Two helper lerps

$$u_0 = \text{lerp}(s, u_{00}, u_{10})$$

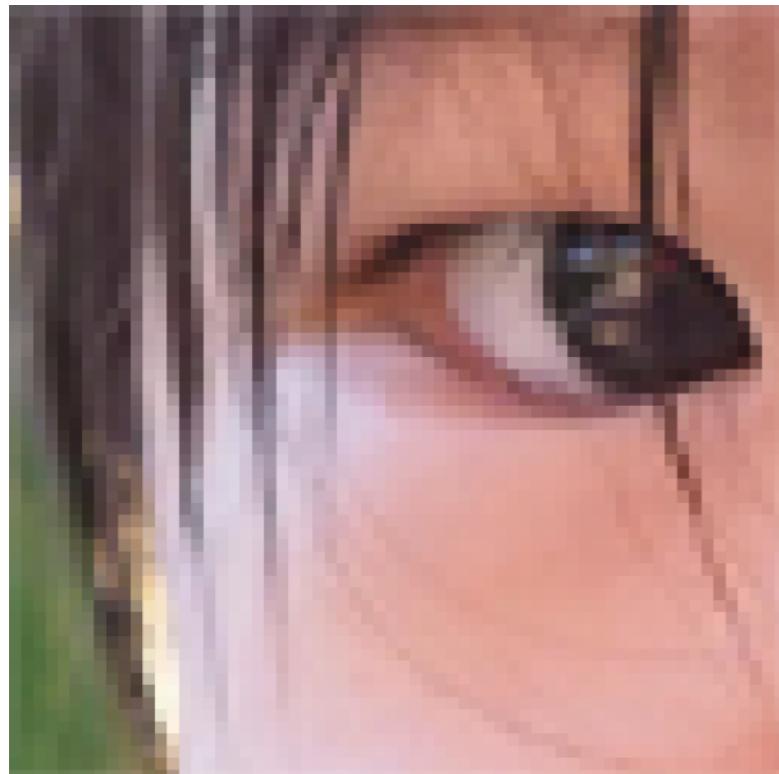

$$u_1 = \text{lerp}(s, u_{01}, u_{11})$$

Final vertical lerp, to get result:

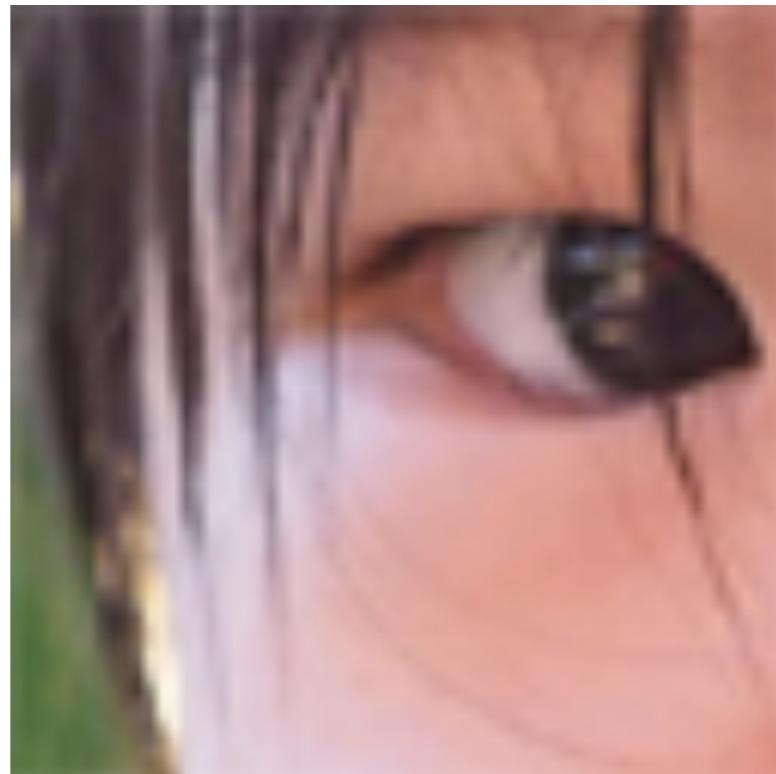

$$f(x, y) = \text{lerp}(t, u_0, u_1)$$

Texture Magnification - Easy Case

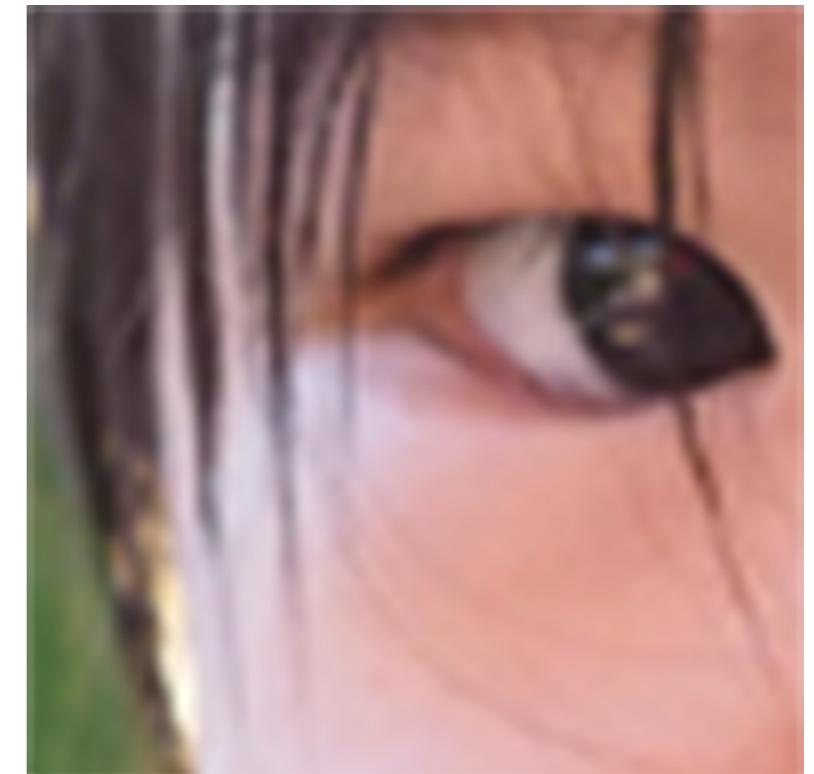

Bilinear interpolation usually gives pretty good results at reasonable costs

Nearest

Bilinear

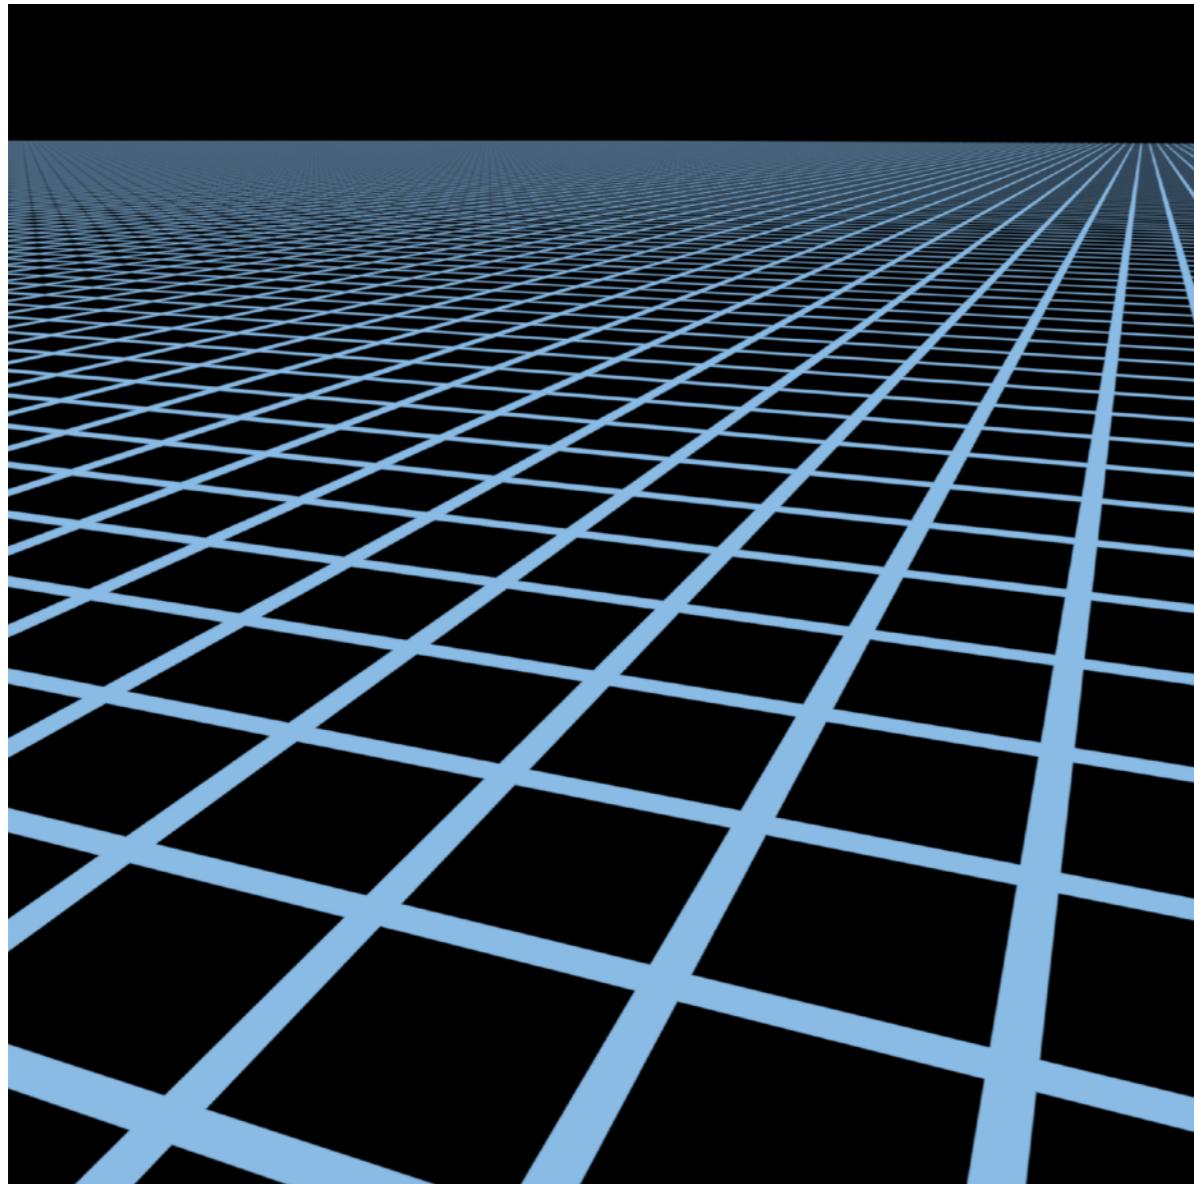

Bicubic

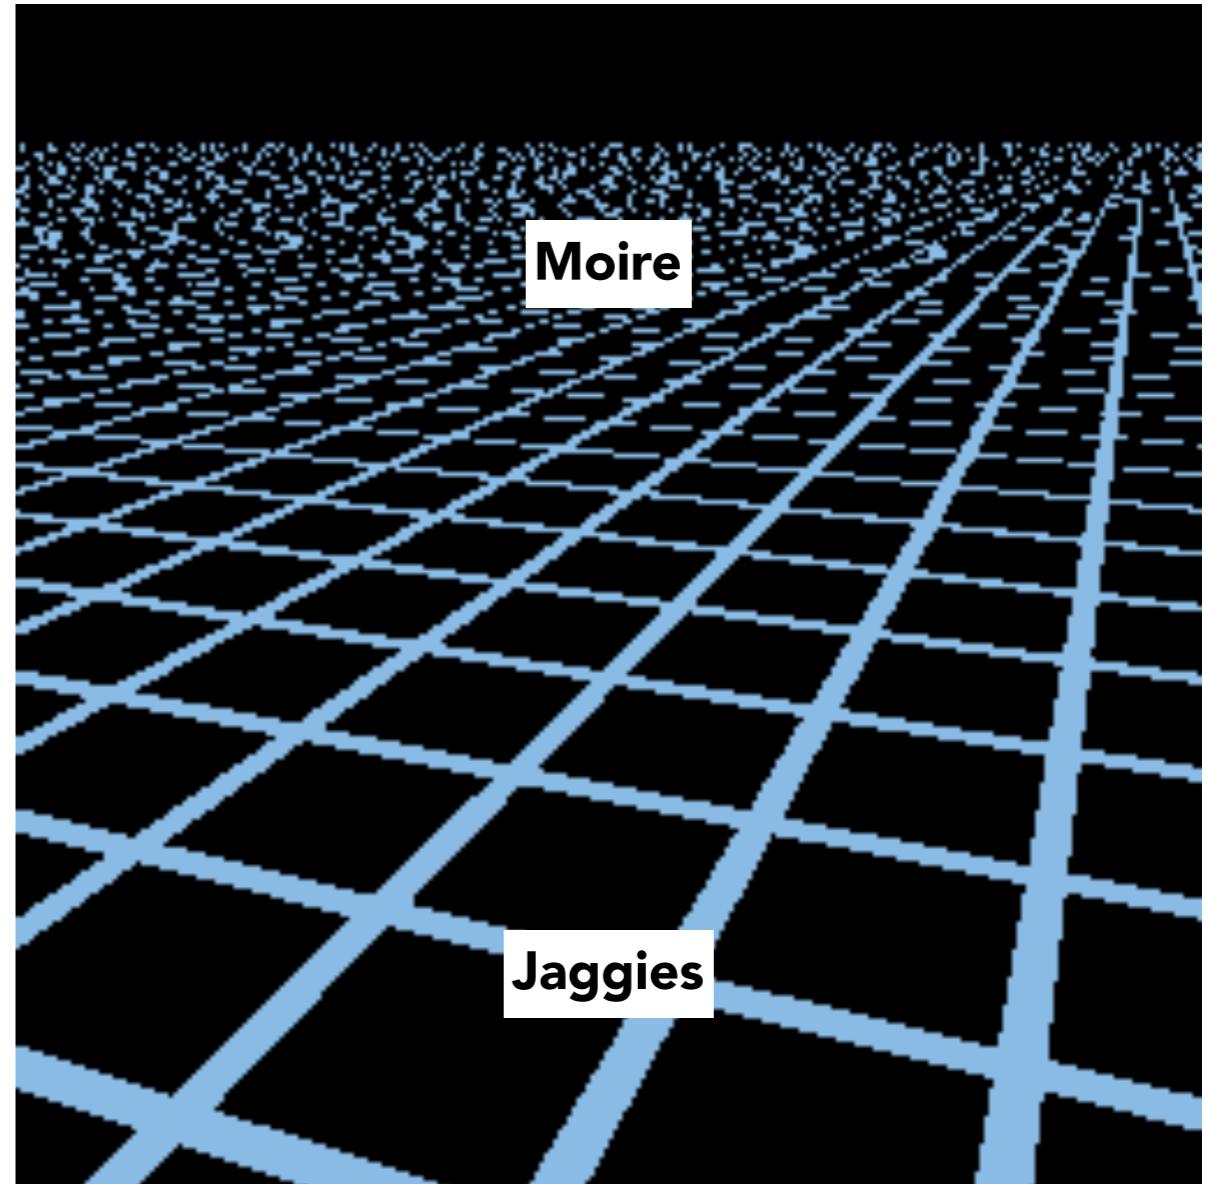

Texture Magnification (**hard case**)

(What if the texture is too large?)

Point Sampling Textures — Problem

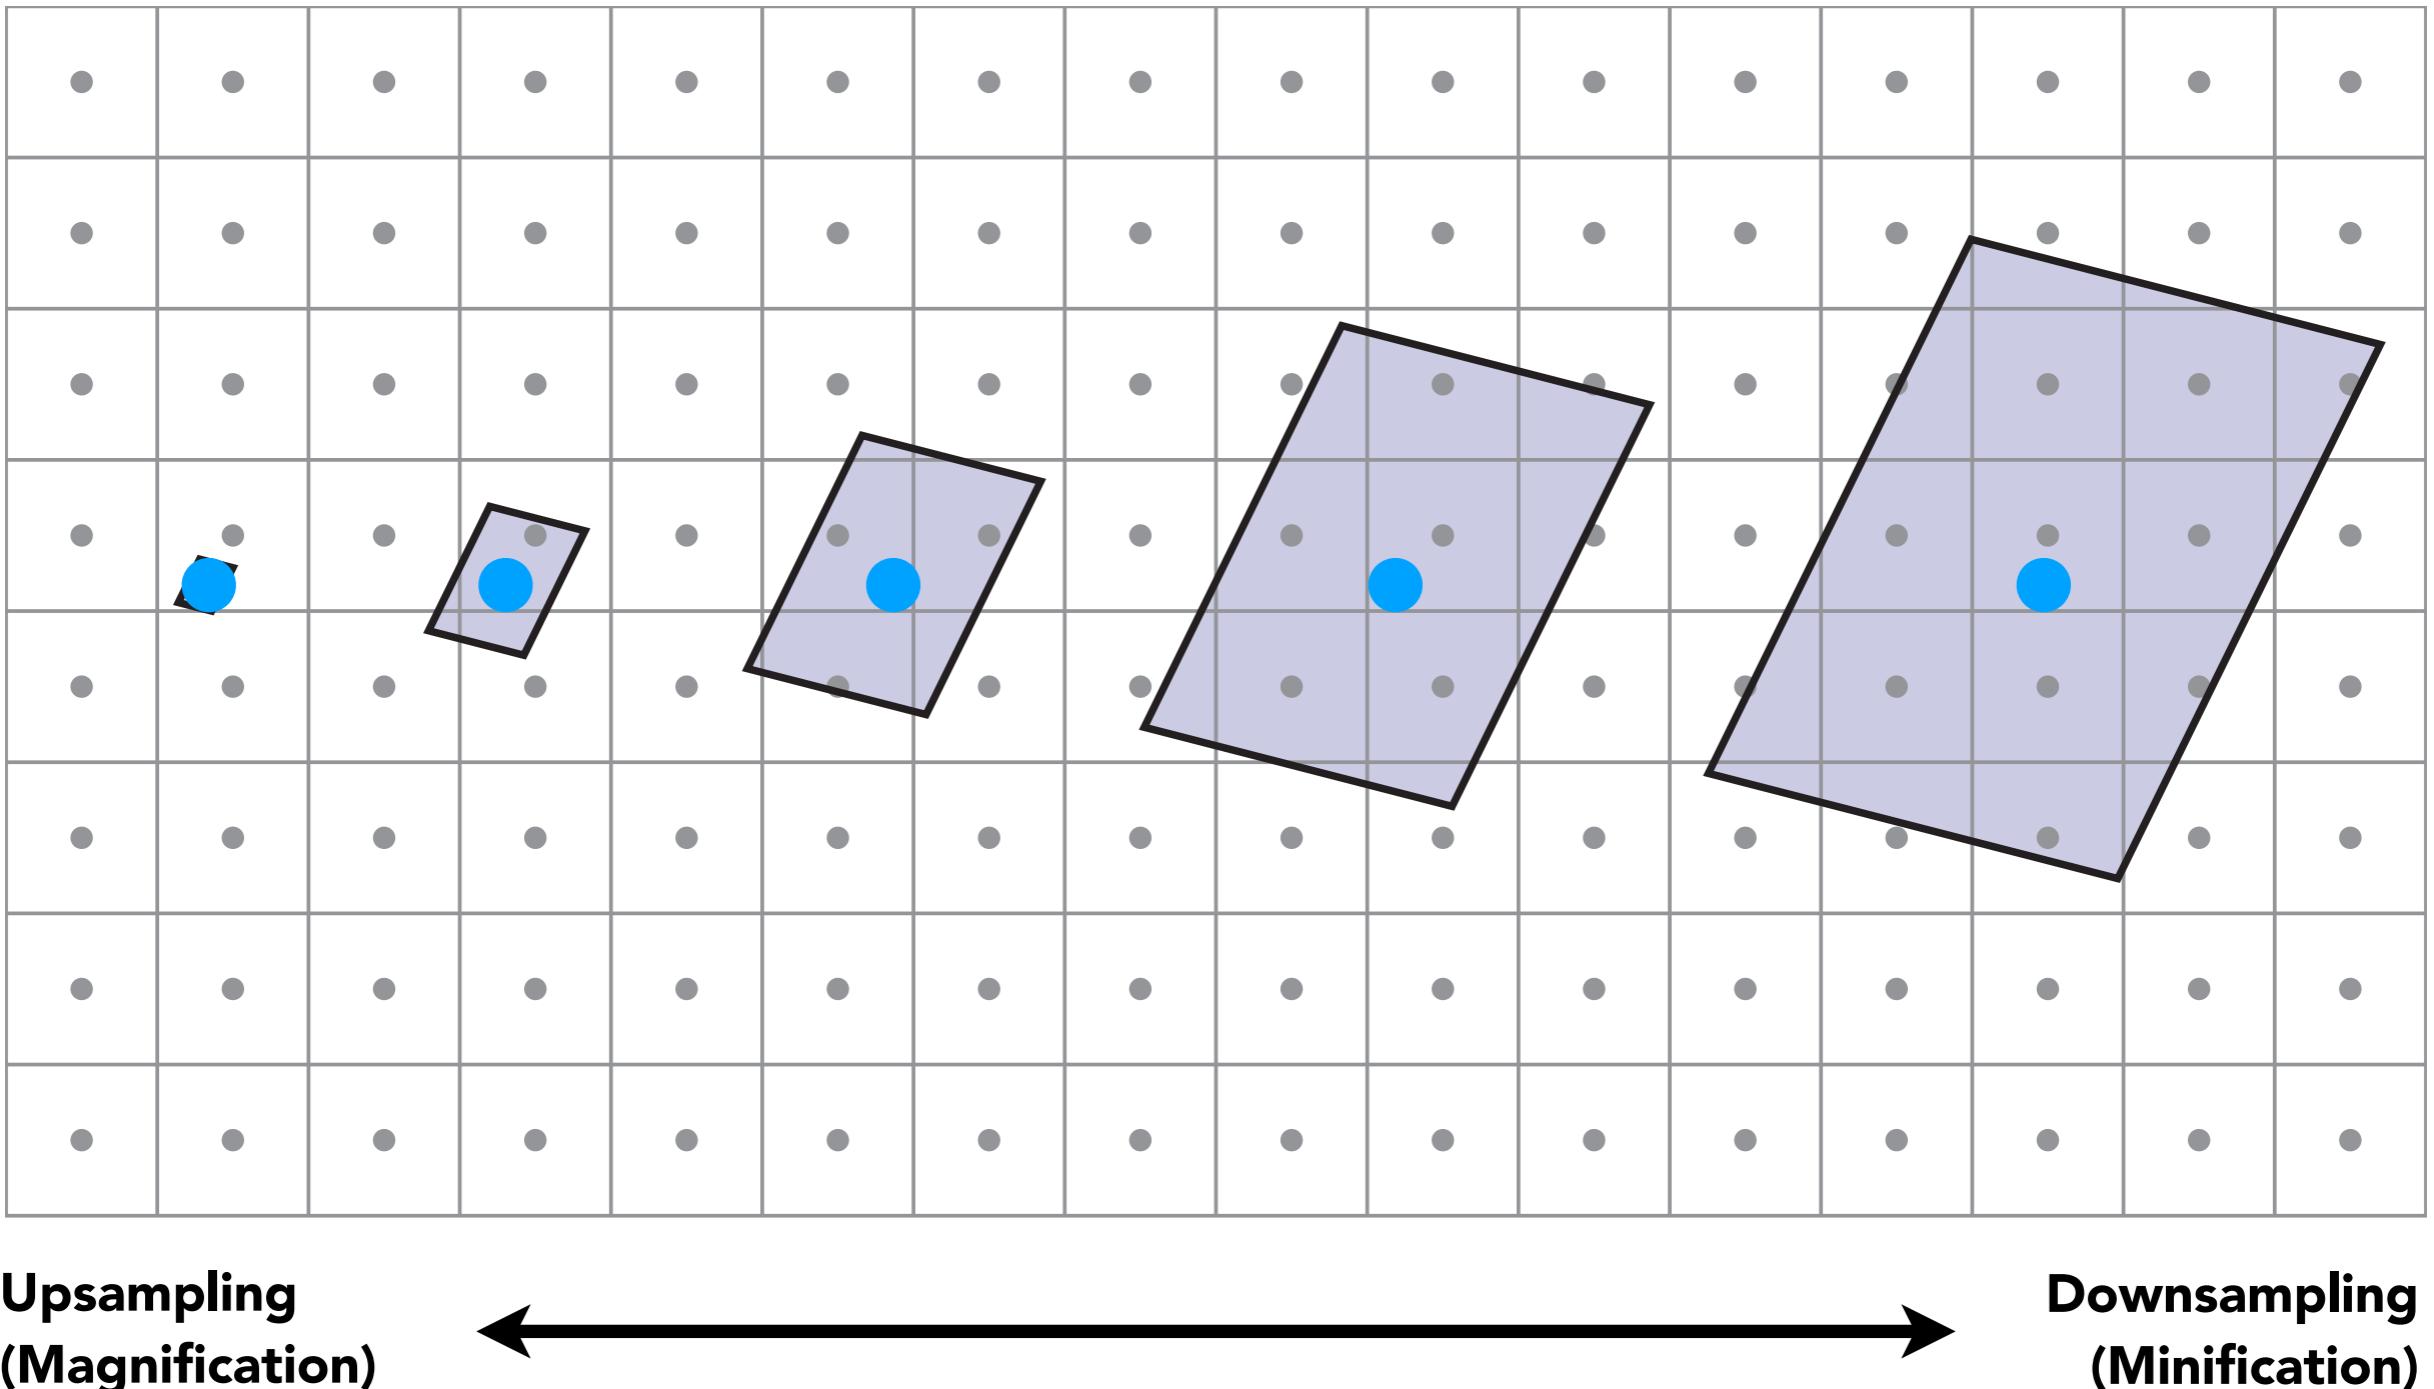

Reference

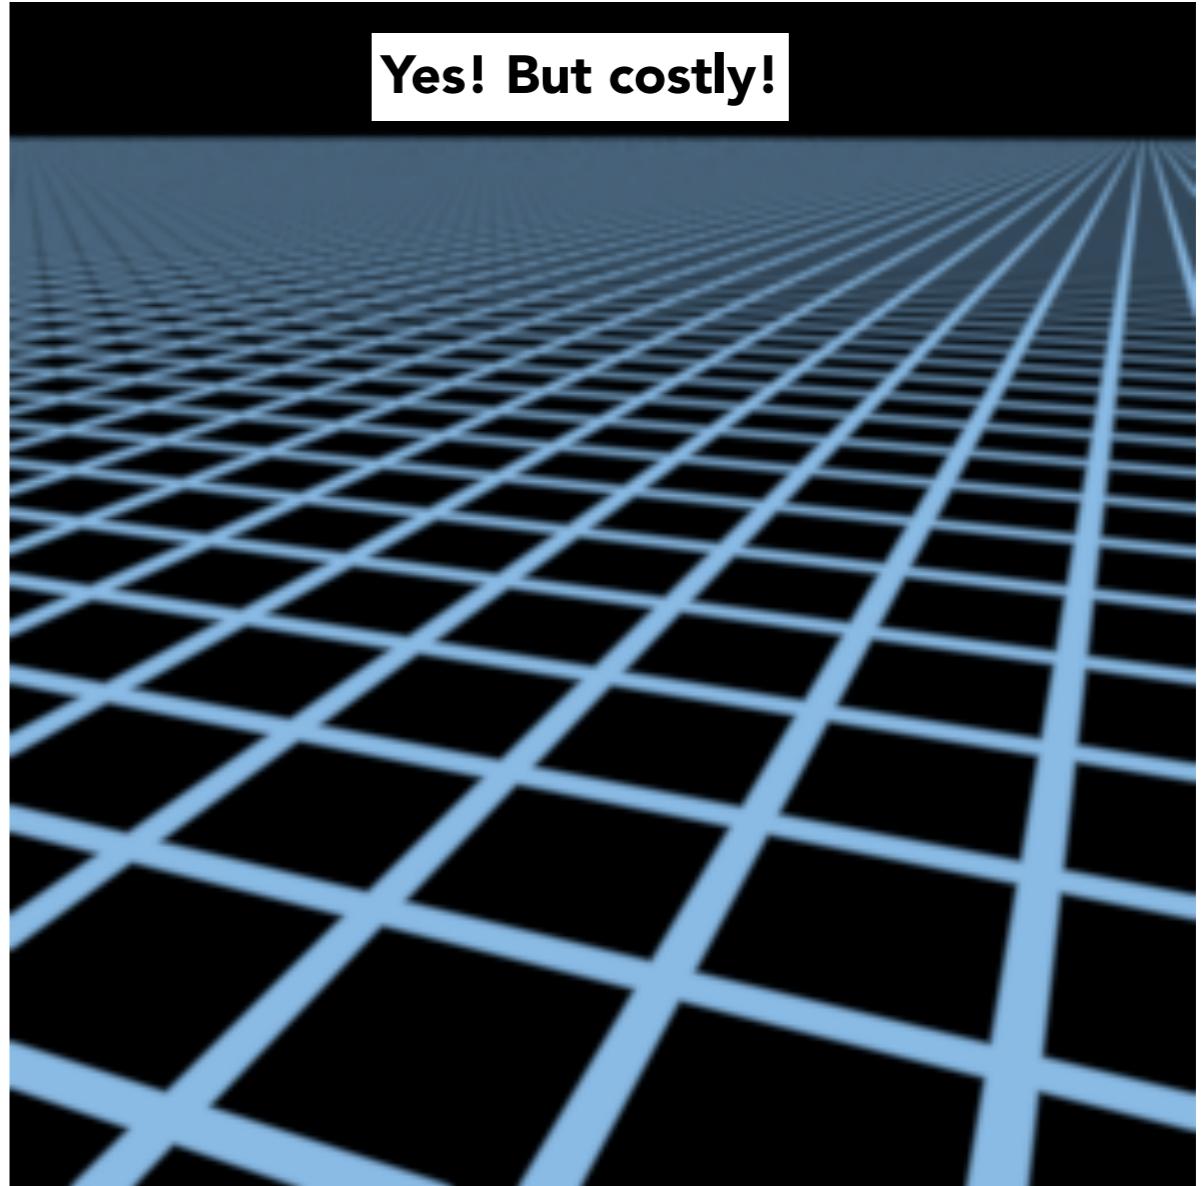

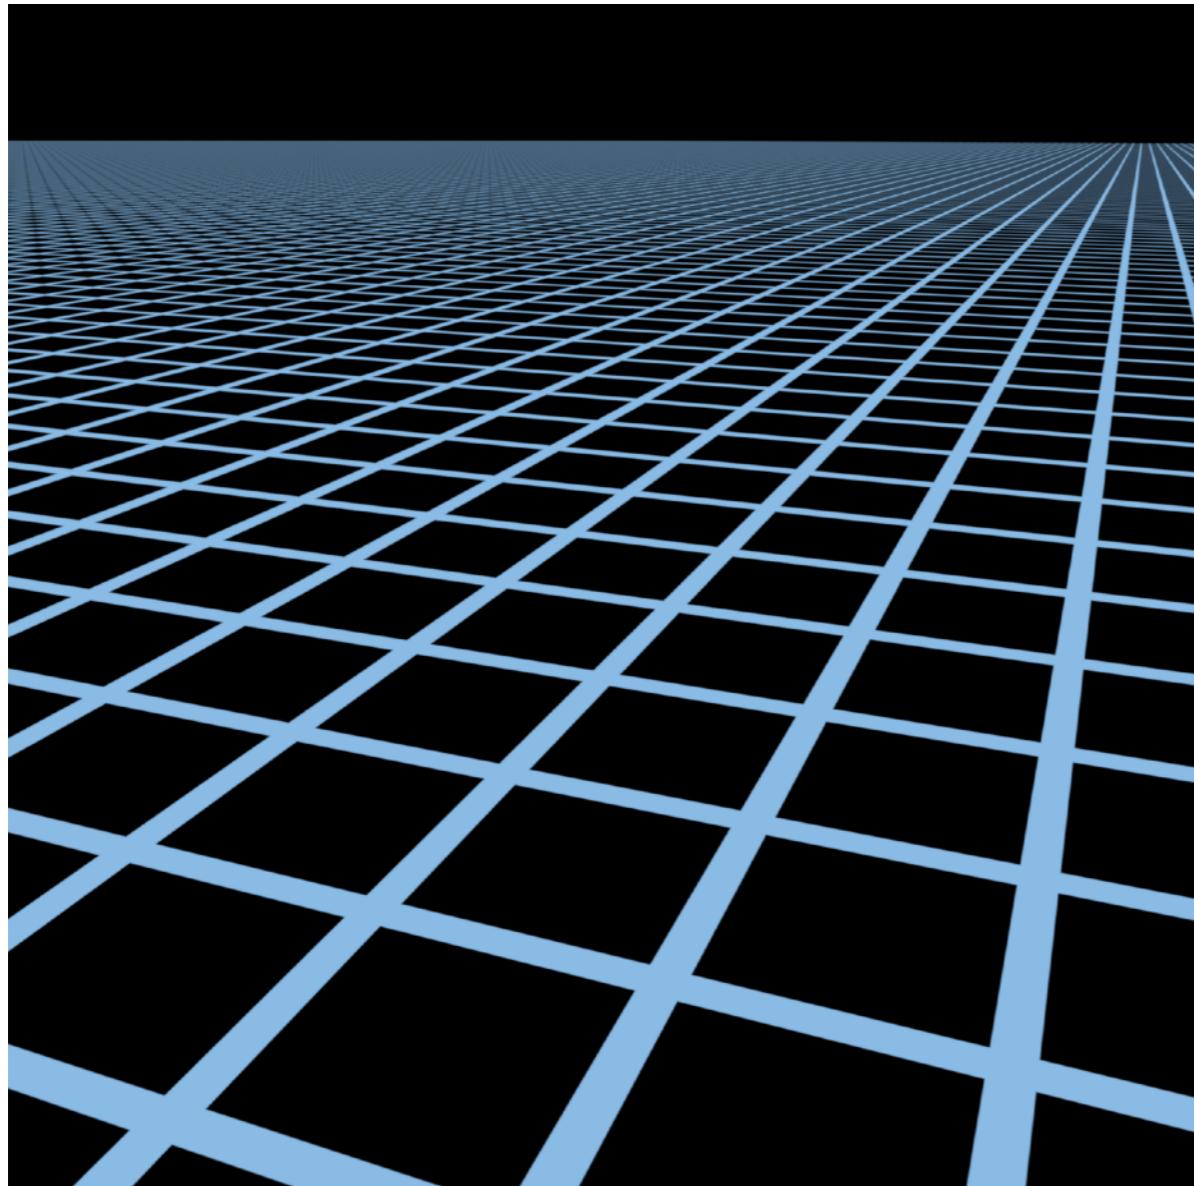

Point sampled

Screen Pixel “Footprint” in Texture

Will Supersampling Do Antialiasing?

512x supersampling

Antialiasing — Supersampling?

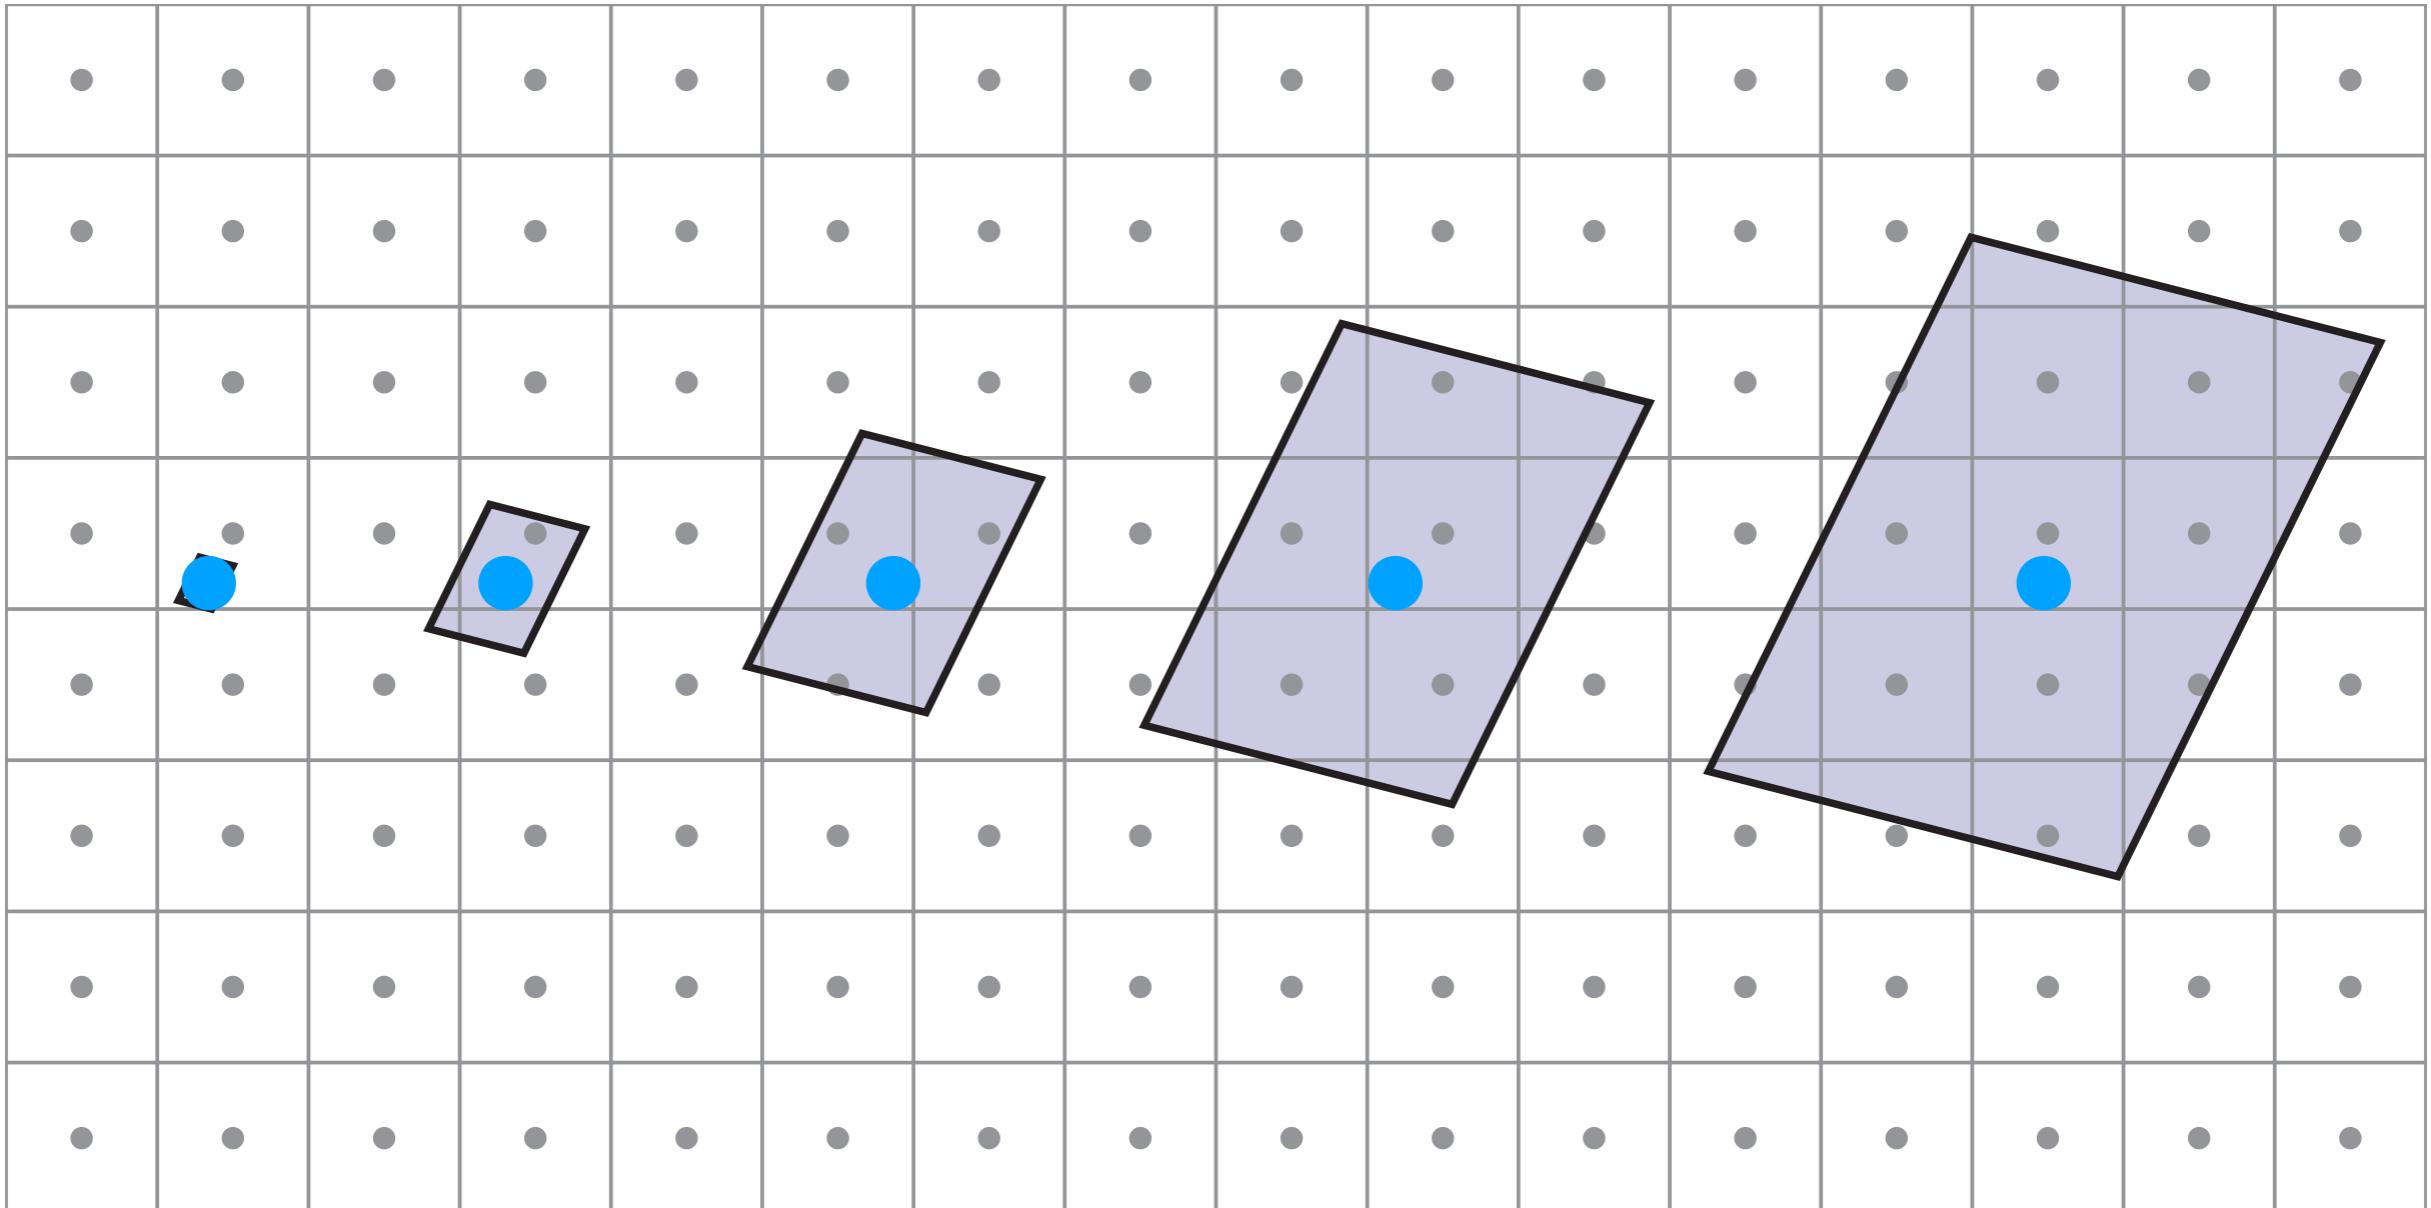

Will supersampling work?

- Yes, high quality, but costly
- When highly minified, many texels in pixel footprint
- Signal frequency too large in a pixel
- Need even higher sampling frequency

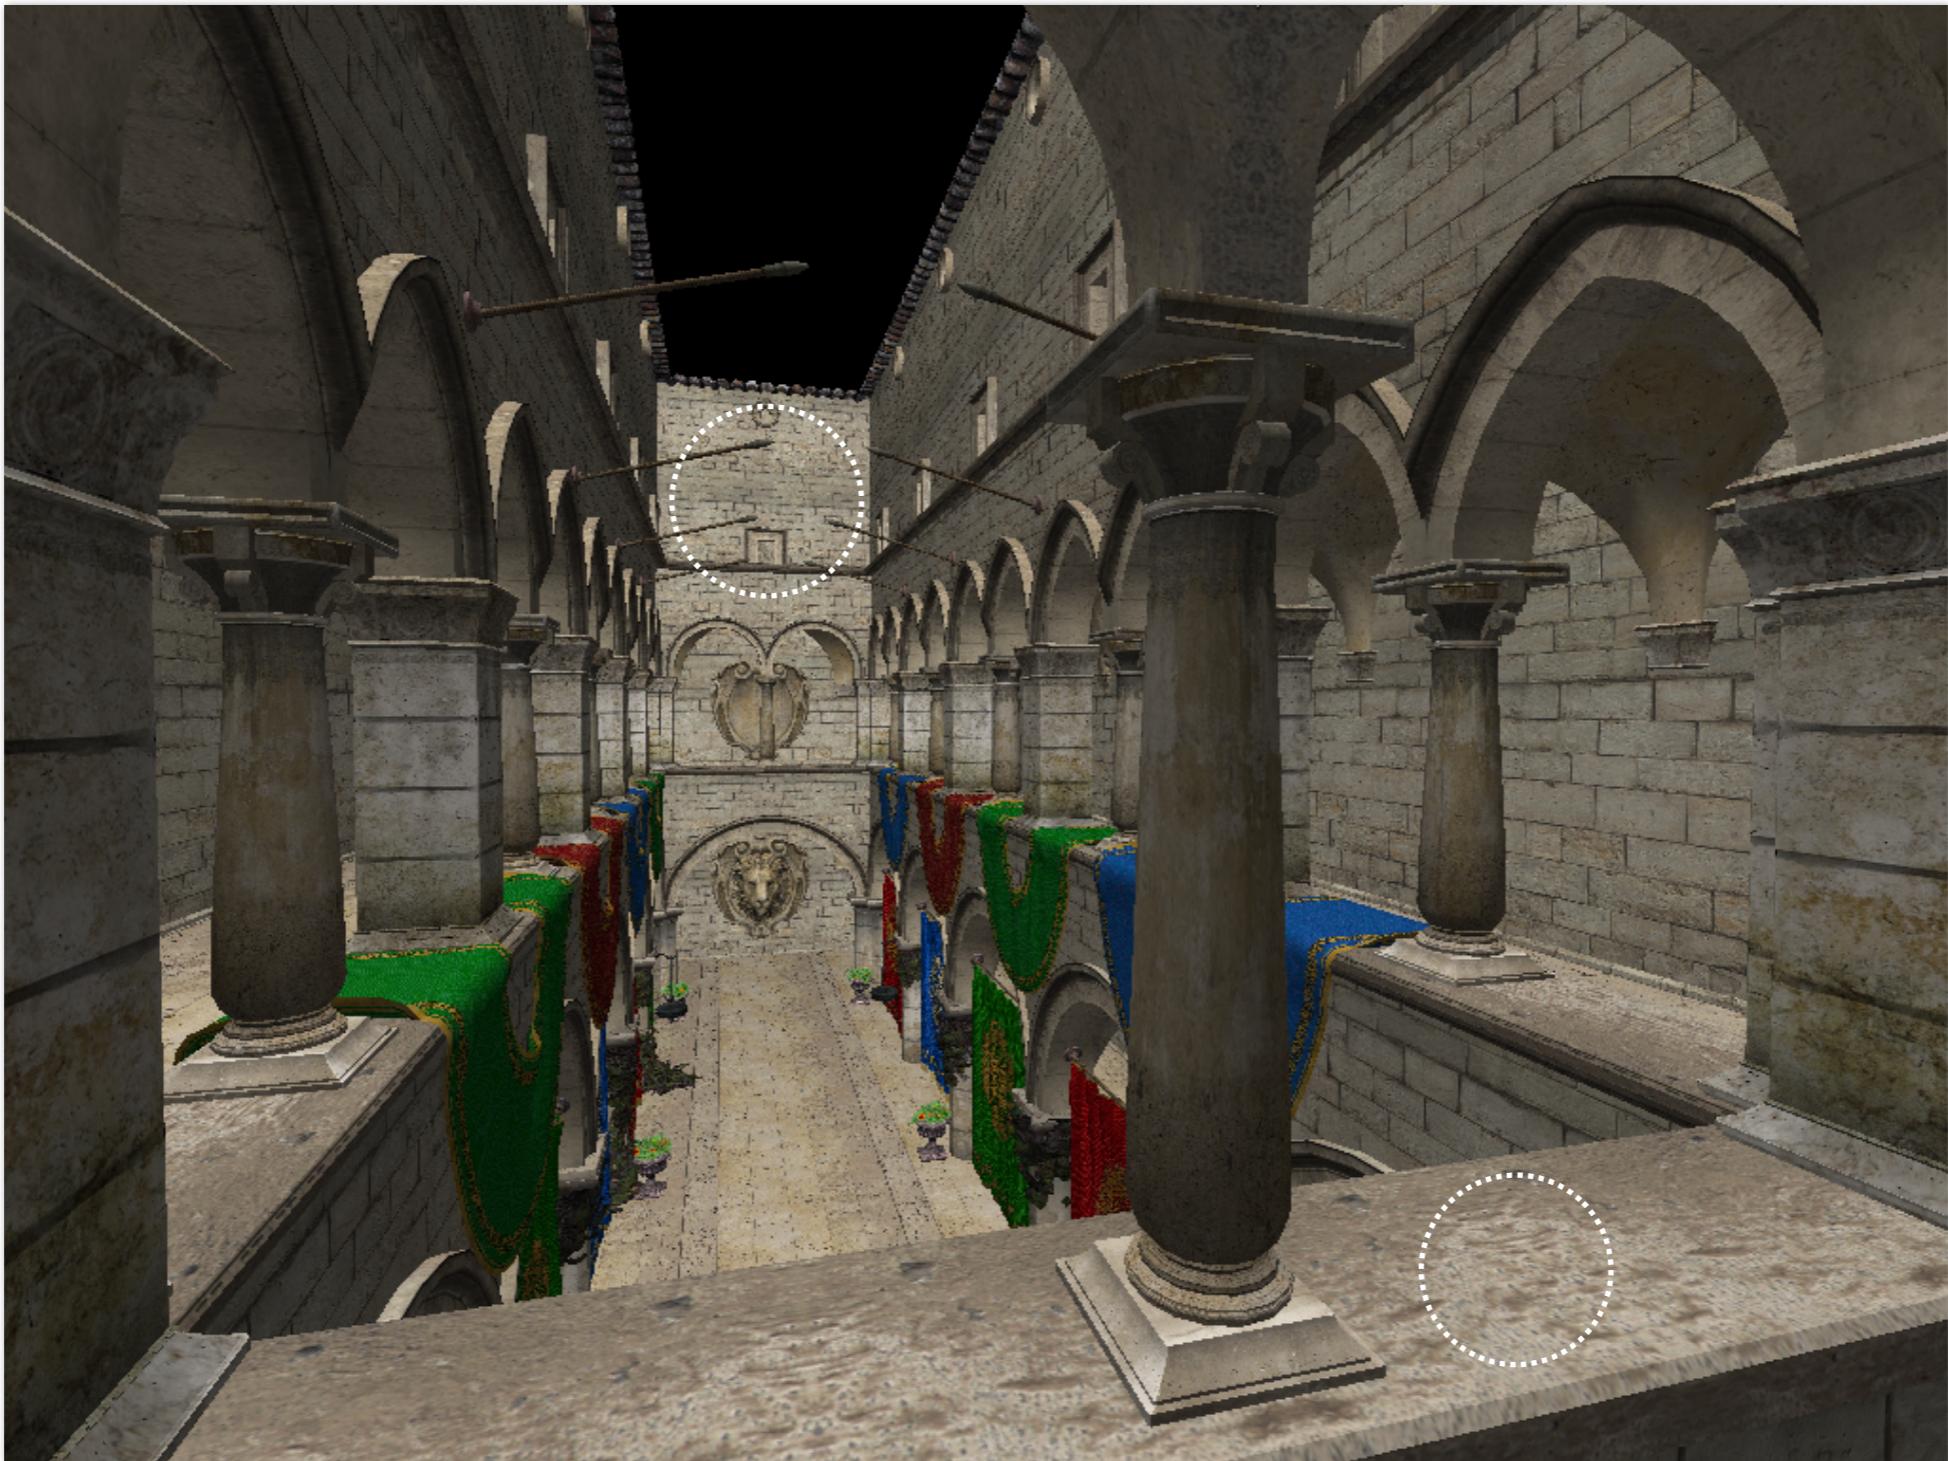

Let's understand this problem in another way

- What if we don't sample?
- Just need to **get the average value within a range!**

Point Query vs. (Avg.) Range Query

Different Pixels -> Different-Sized Footprints

Mipmap

Allowing (fast, approx., square) range queries

Mipmap (L. Williams 83)

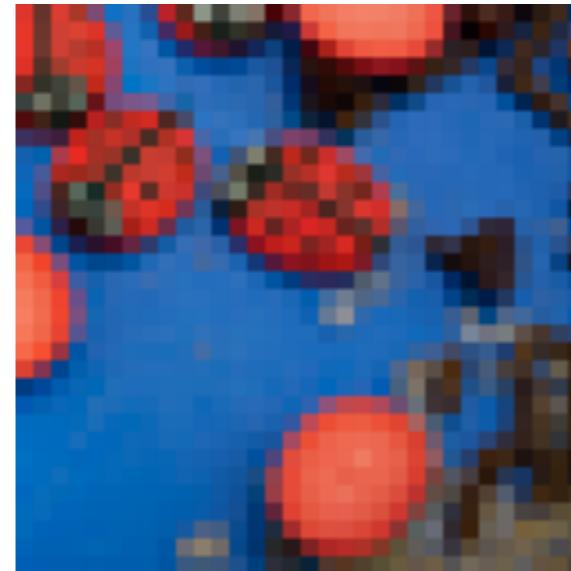

"Mip" comes from the Latin **"multum in parvo"**, meaning a multitude in a small space

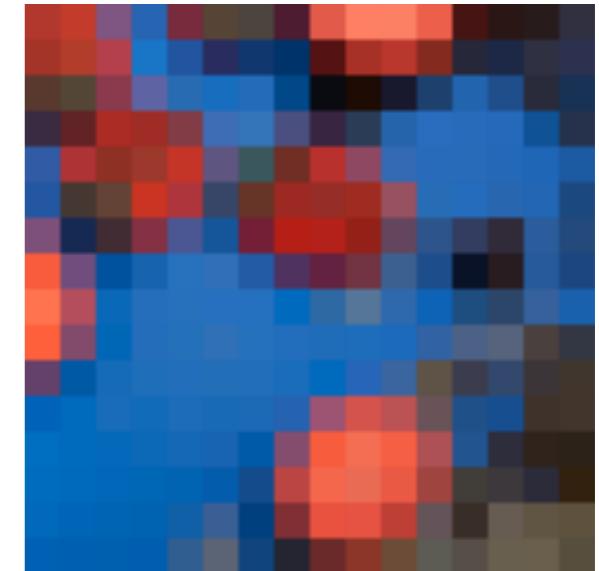

Level 0 = 128x128

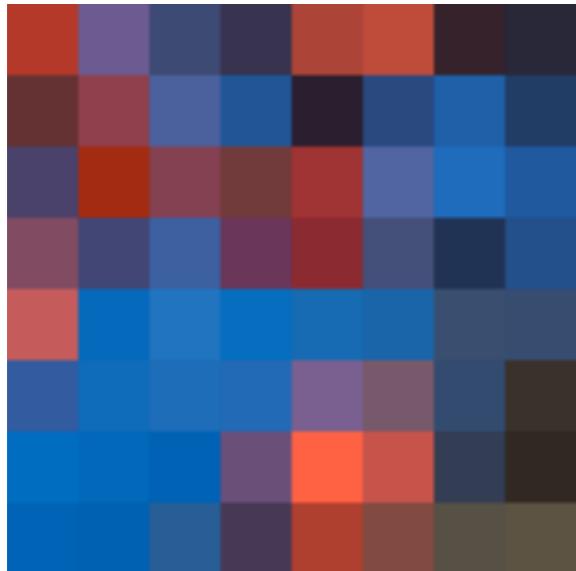

Level 1 = 64x64

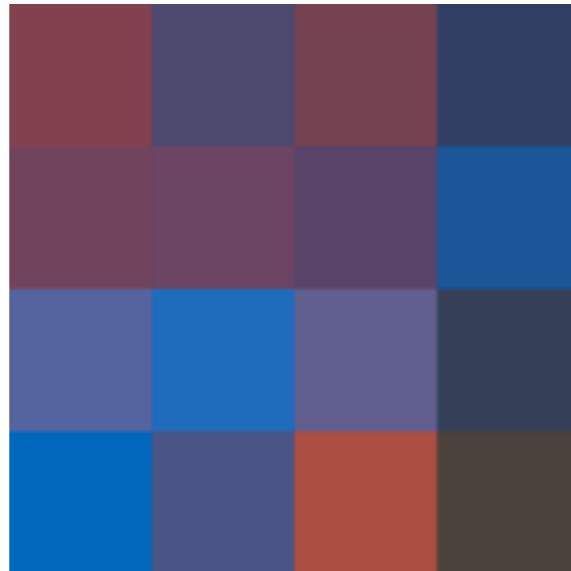

Level 2 = 32x32

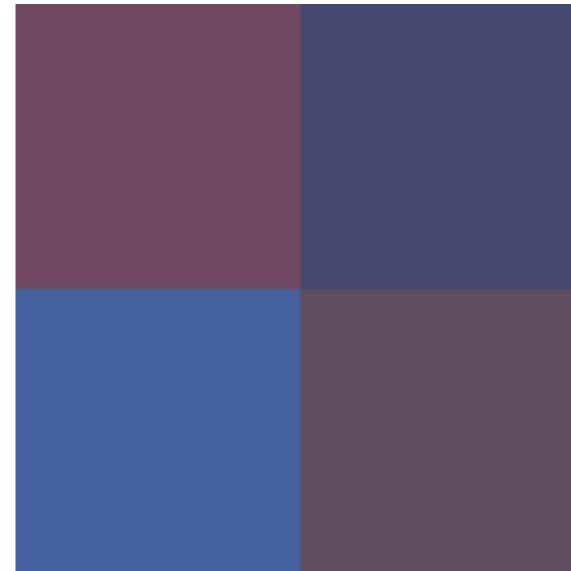

Level 3 = 16x16

Level 4 = 8x8

Level 5 = 4x4

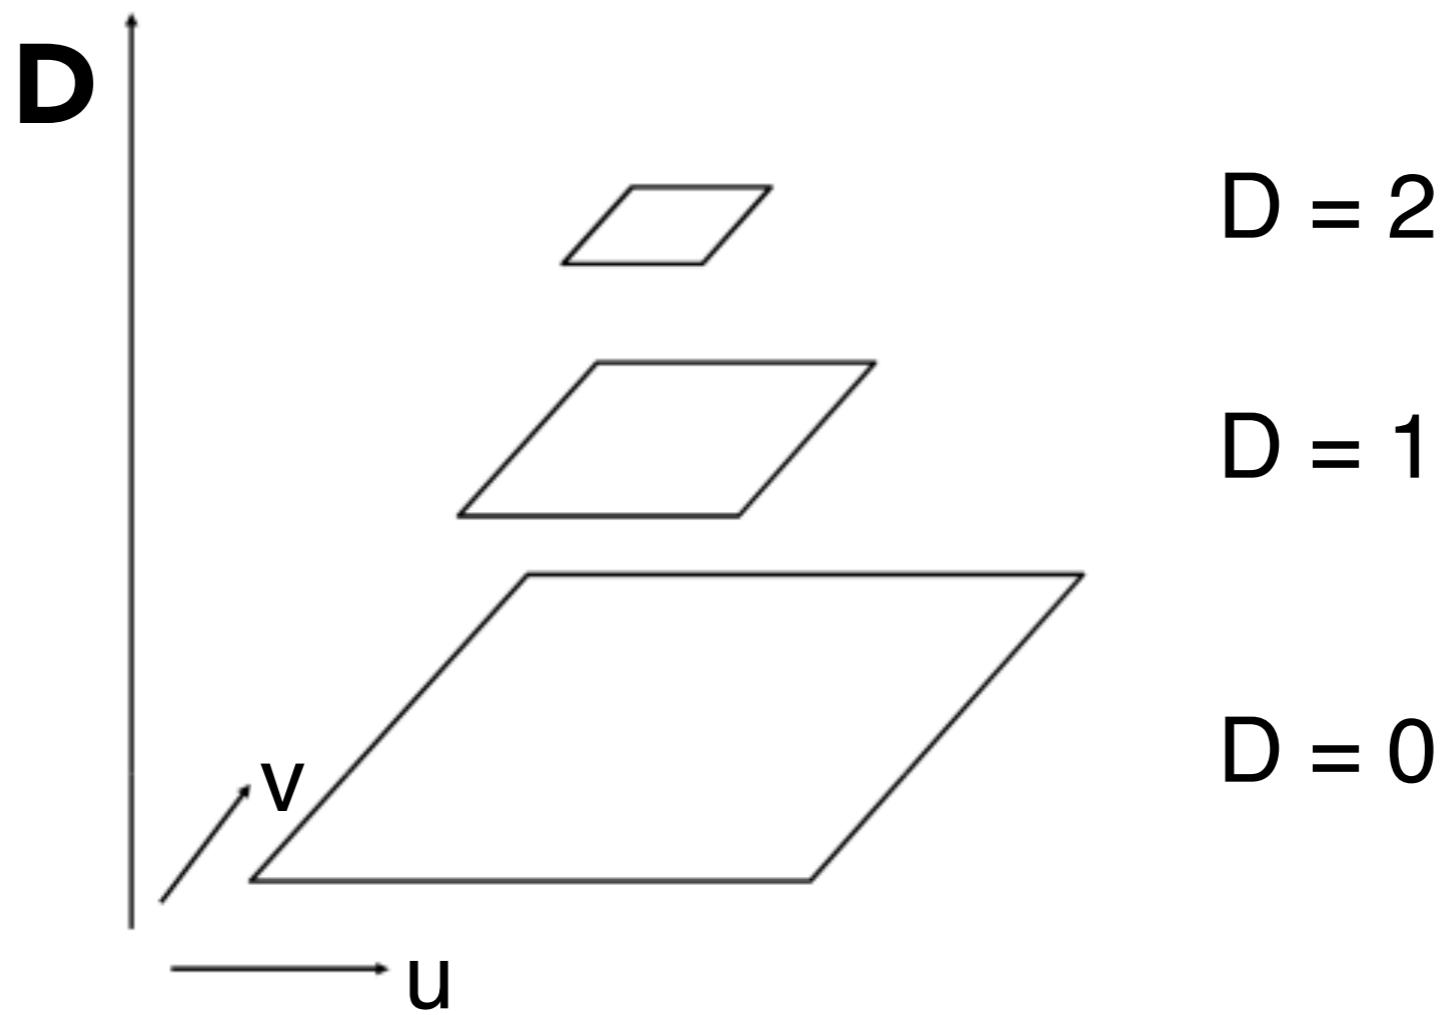

Level 6 = 2x2

Level 7 = 1x1

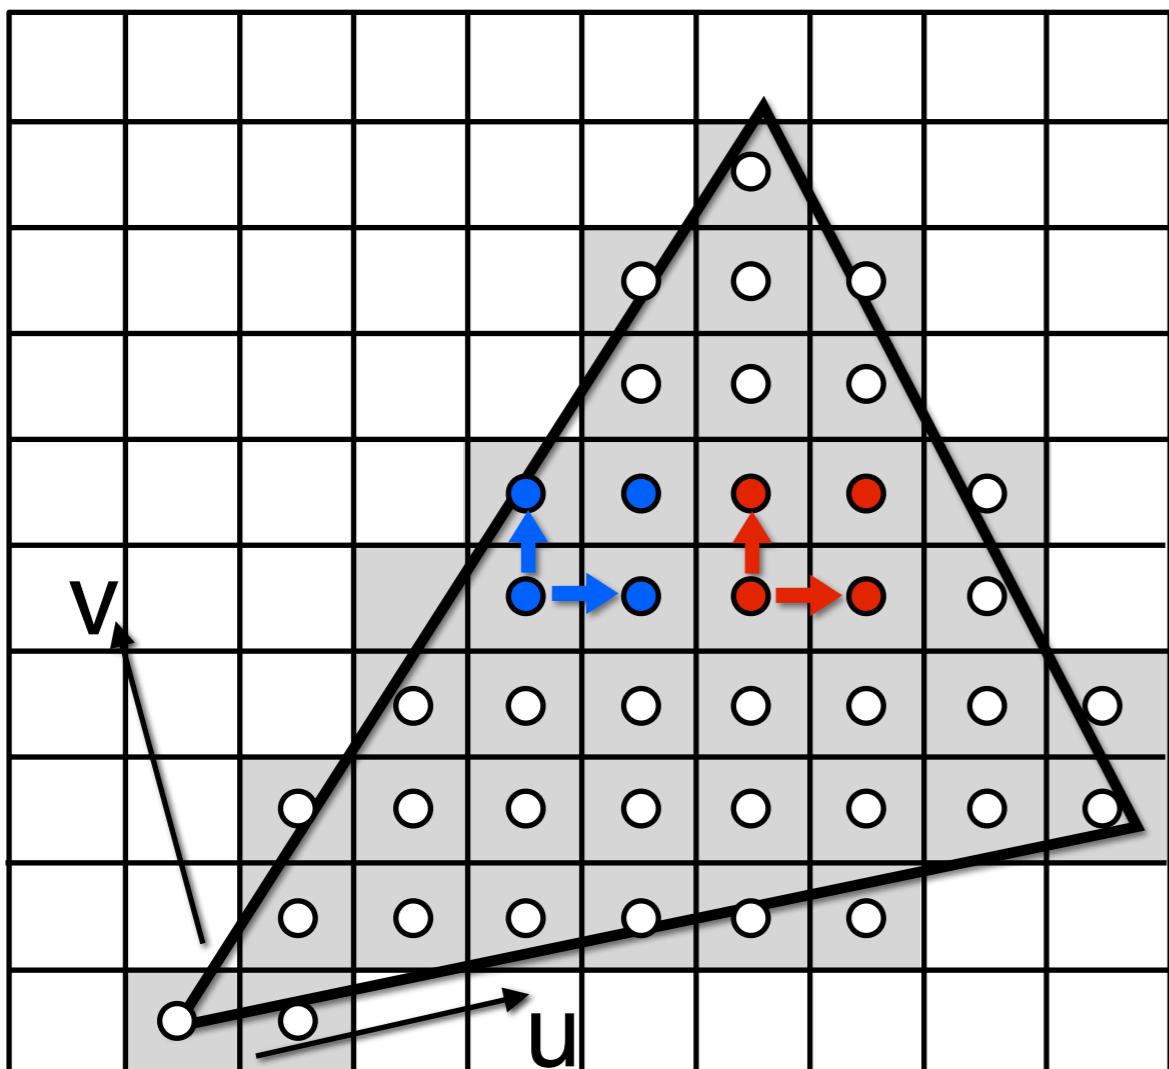

Mipmap (L. Williams 83)

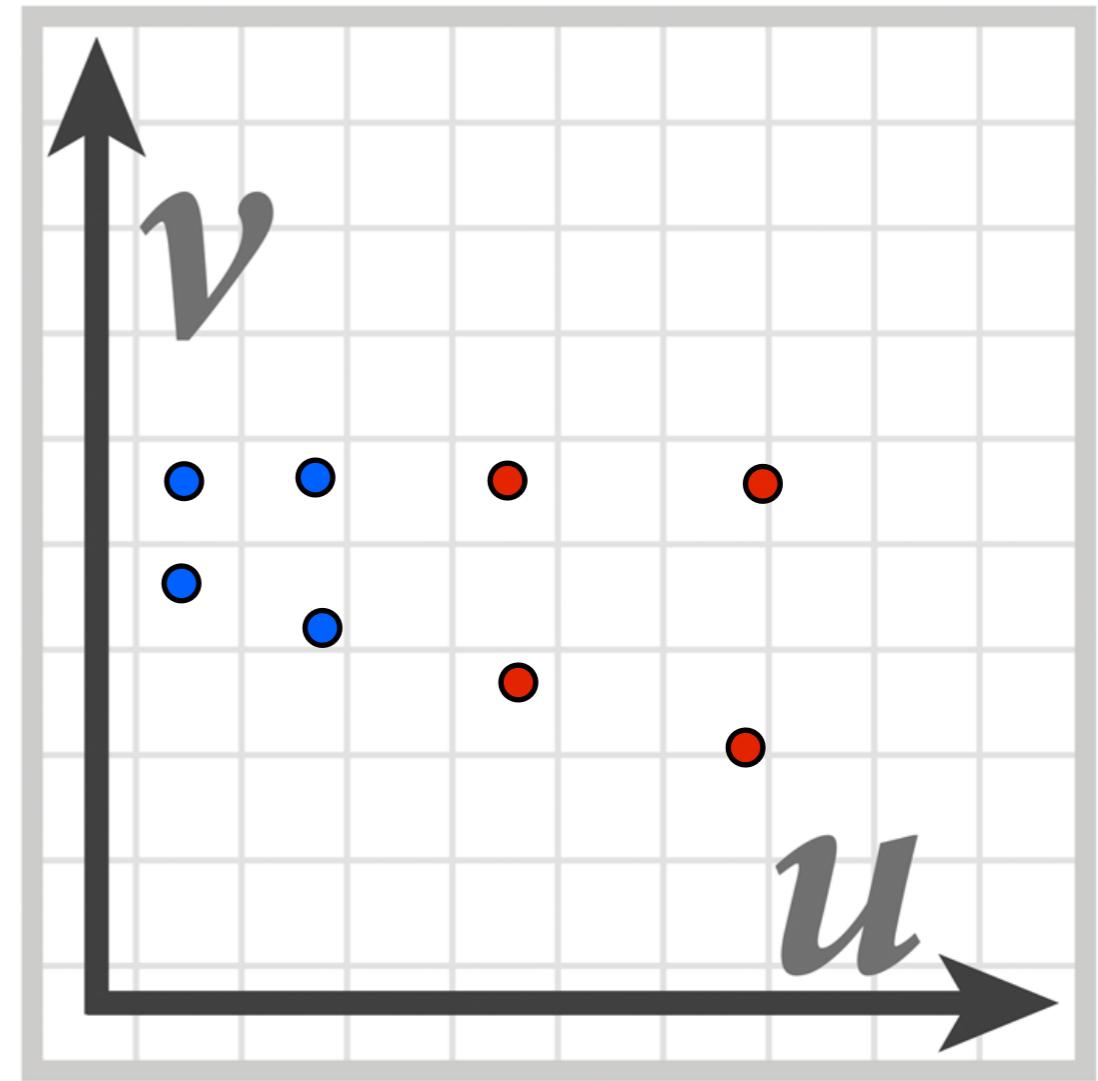

“Mip hierarchy”
level = D

What is the storage overhead of a mipmap?

Computing Mipmap Level D

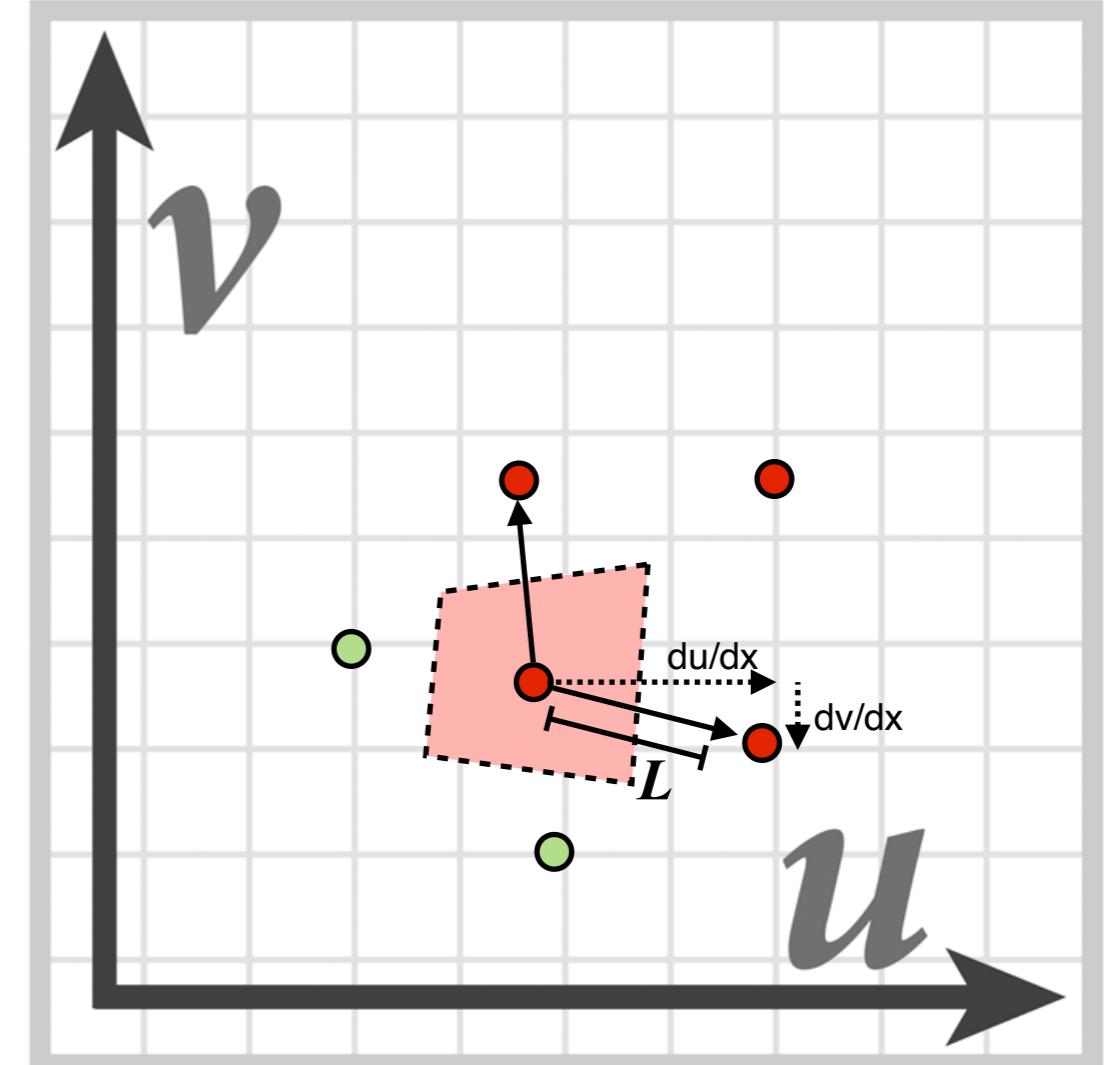

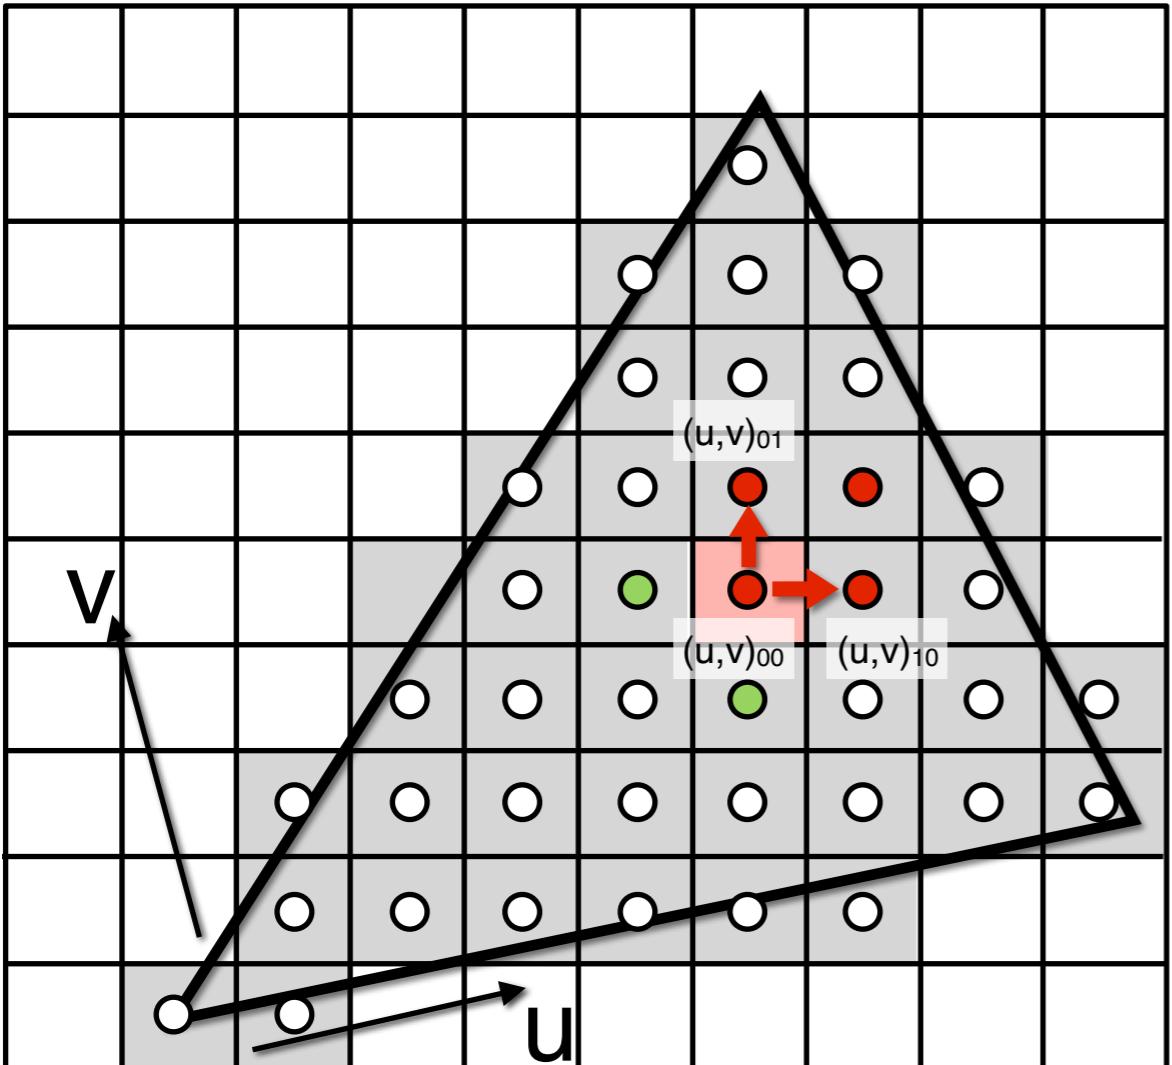

Screen space (x,y)

Texture space (u,v)

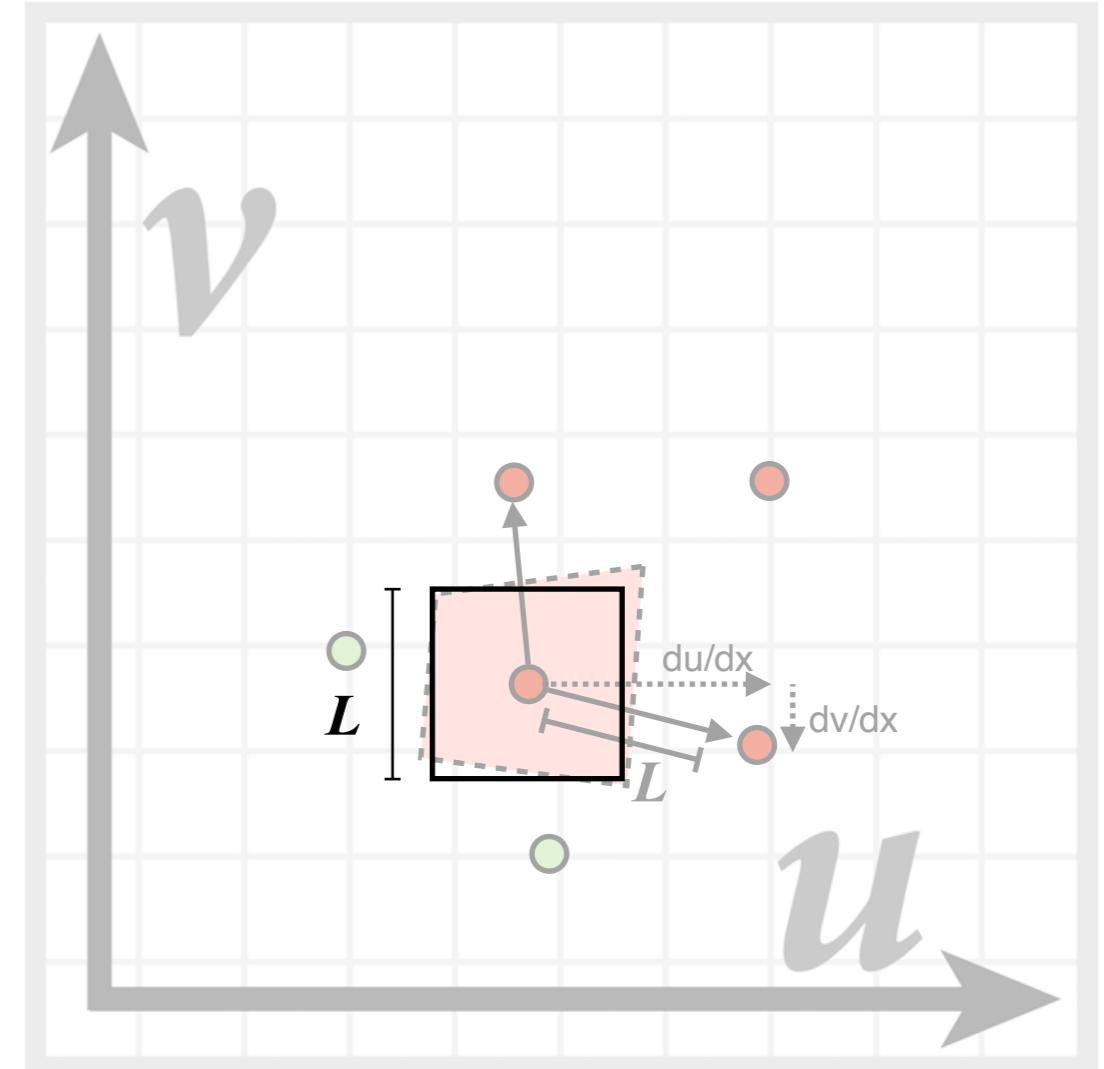

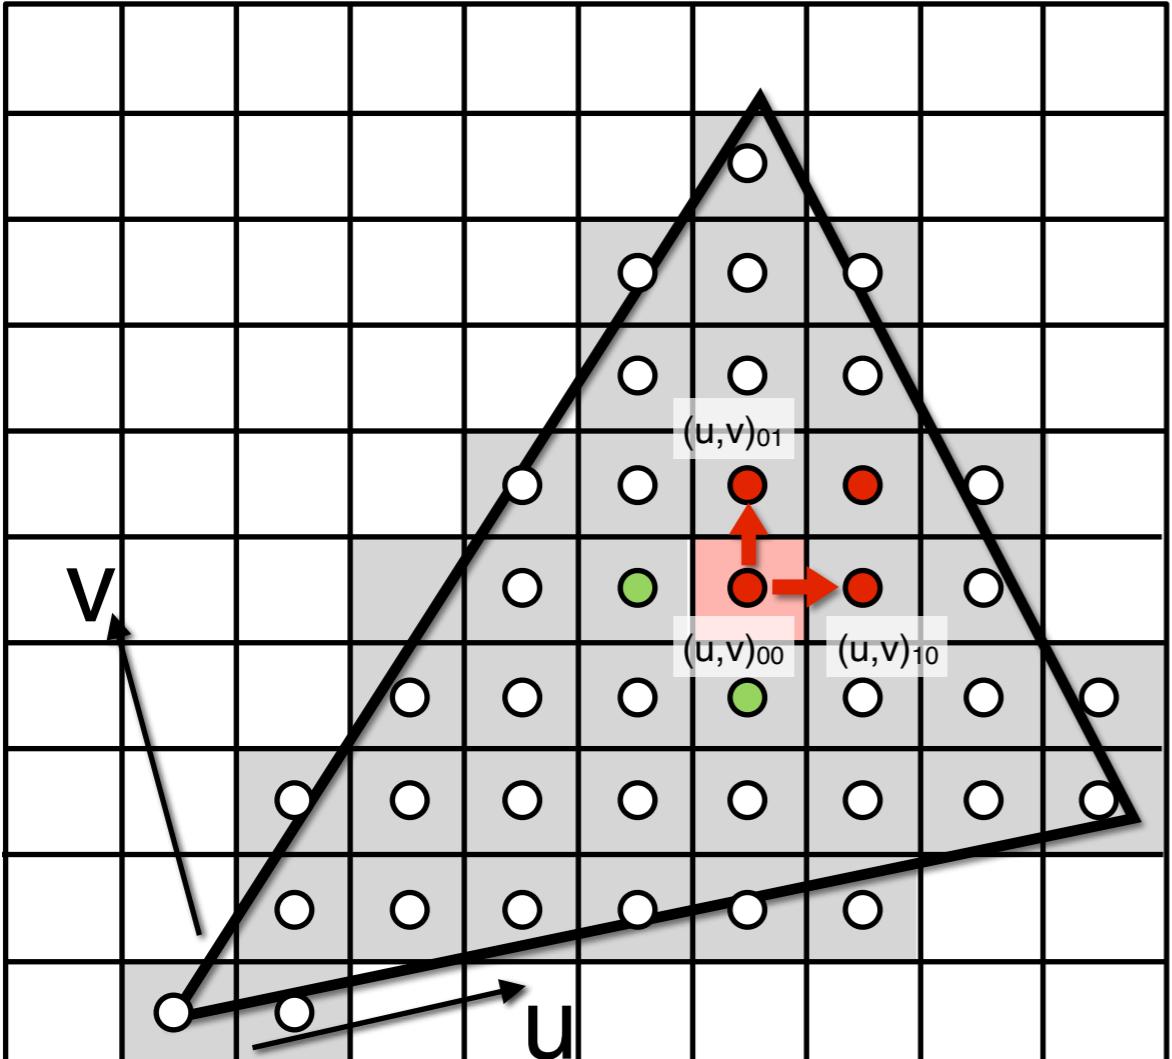

Estimate texture footprint using texture coordinates of neighboring screen samples

Computing Mipmap Level D

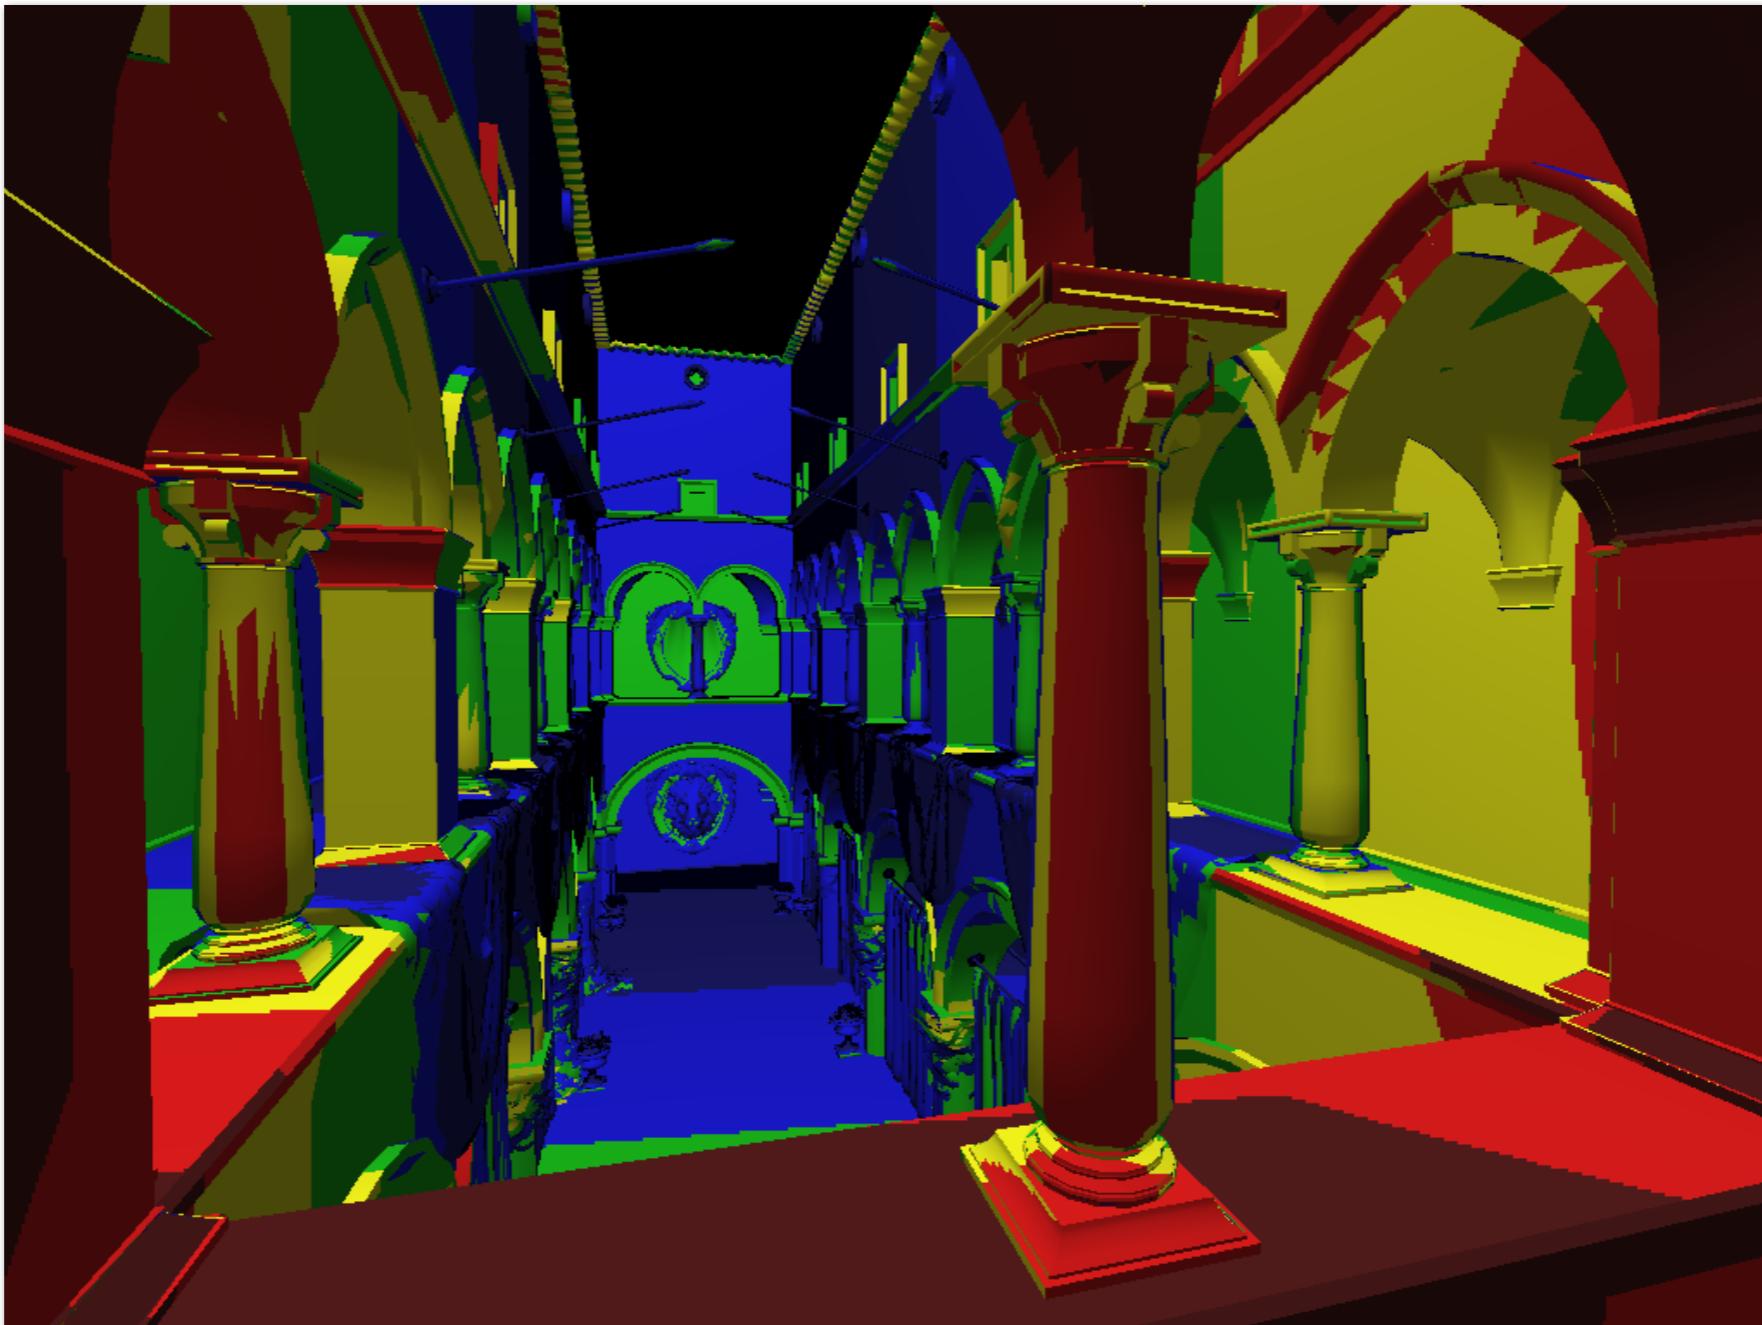

$$D = \log_2 L \quad L = \max \left(\sqrt{\left(\frac{du}{dx} \right)^2 + \left(\frac{dv}{dx} \right)^2}, \sqrt{\left(\frac{du}{dy} \right)^2 + \left(\frac{dv}{dy} \right)^2} \right)$$

Computing Mipmap Level D

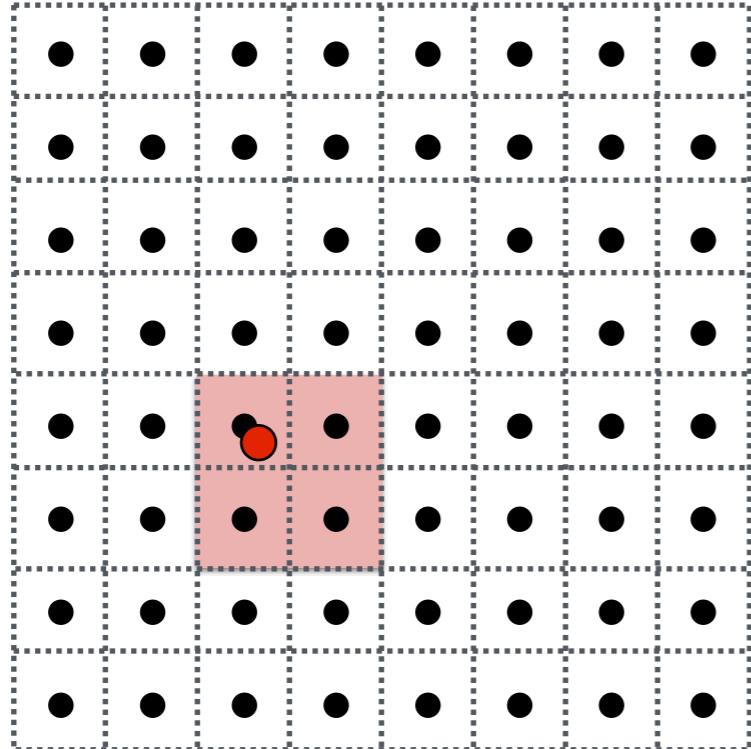

$$D = \log_2 L \quad L = \max \left(\sqrt{\left(\frac{du}{dx} \right)^2 + \left(\frac{dv}{dx} \right)^2}, \sqrt{\left(\frac{du}{dy} \right)^2 + \left(\frac{dv}{dy} \right)^2} \right)$$

Visualization of Mipmap Level

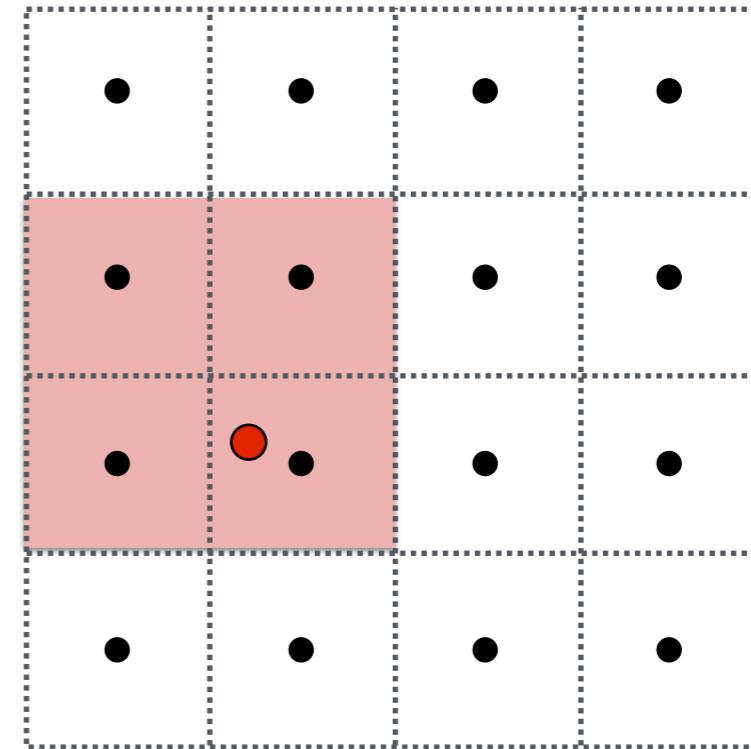

D rounded to nearest integer level

Trilinear Interpolation

Mipmap Level D

Mipmap Level D+1

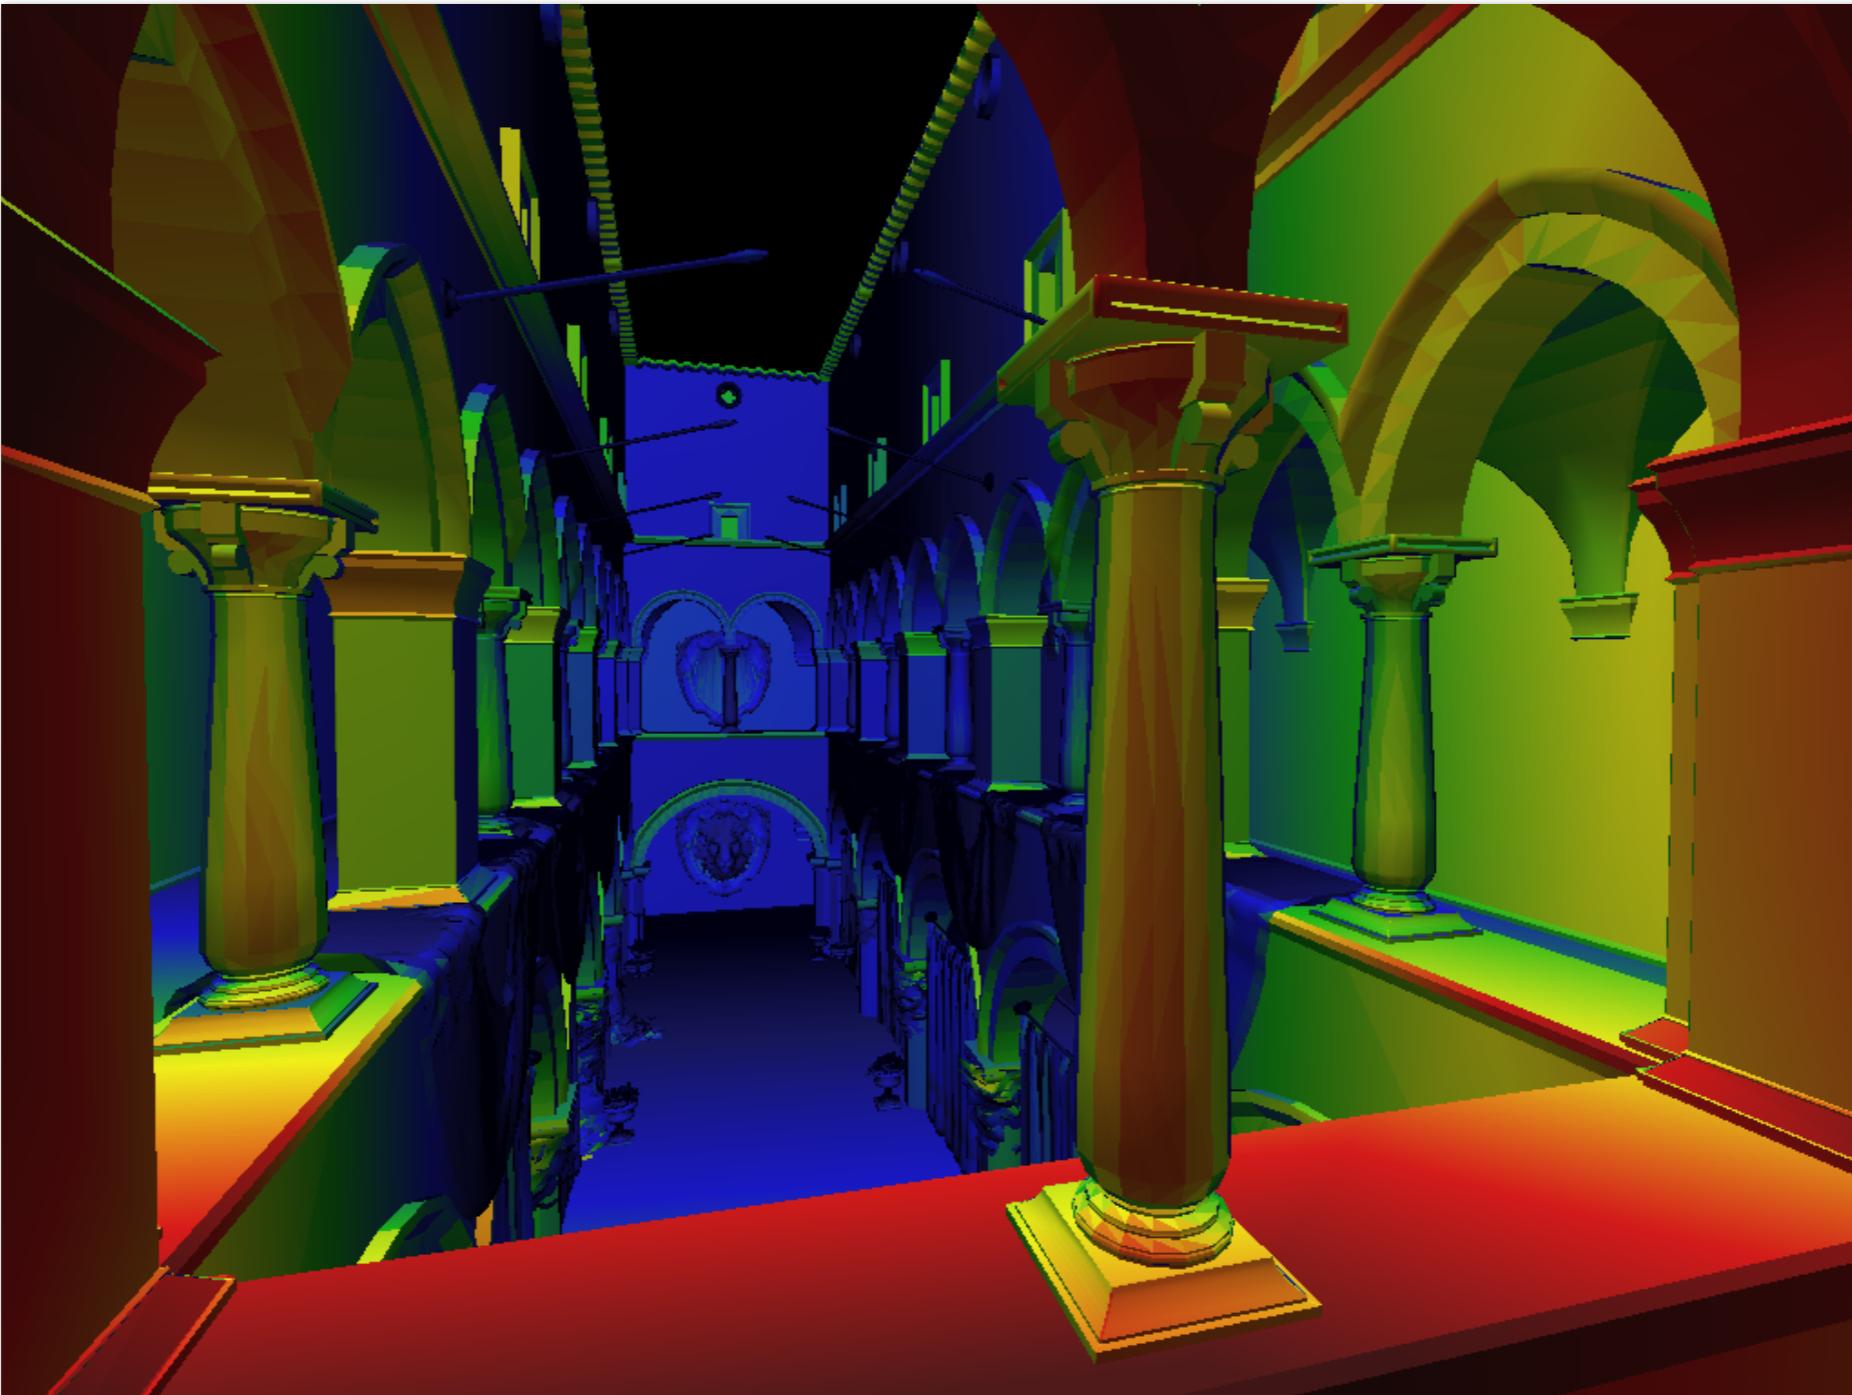

Bilinear result

Bilinear result

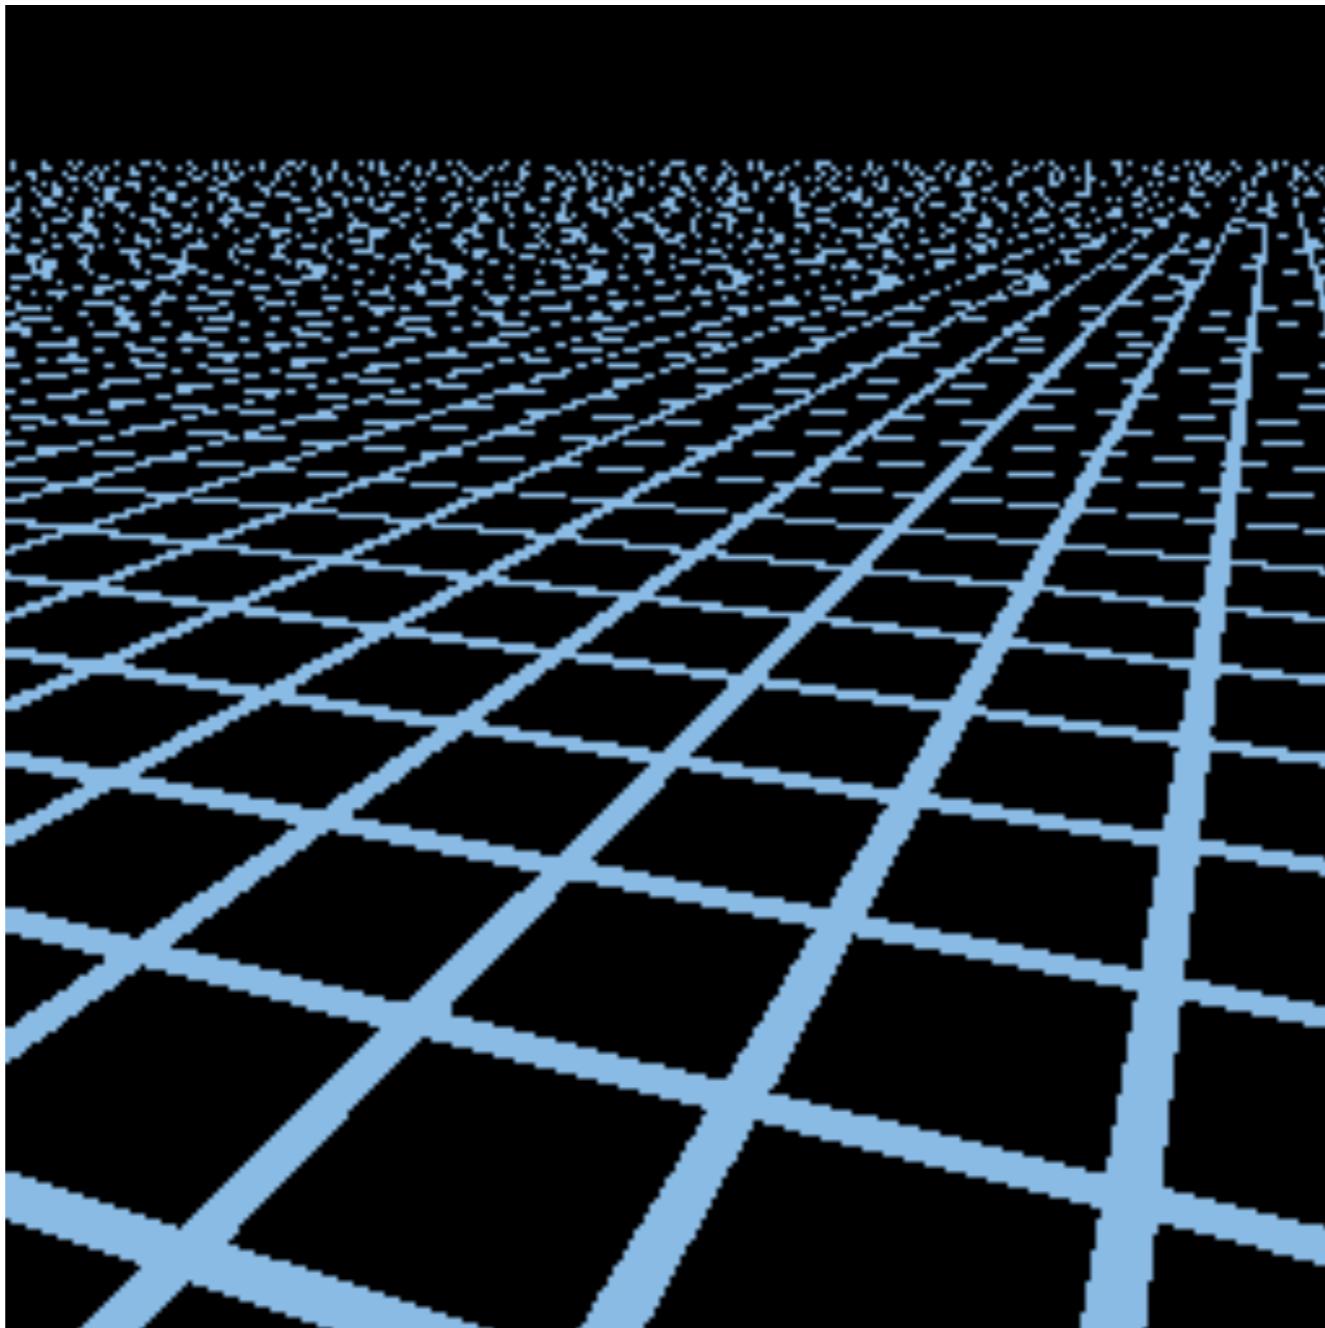

Linear interpolation based on continuous D value

Visualization of Mipmap Level

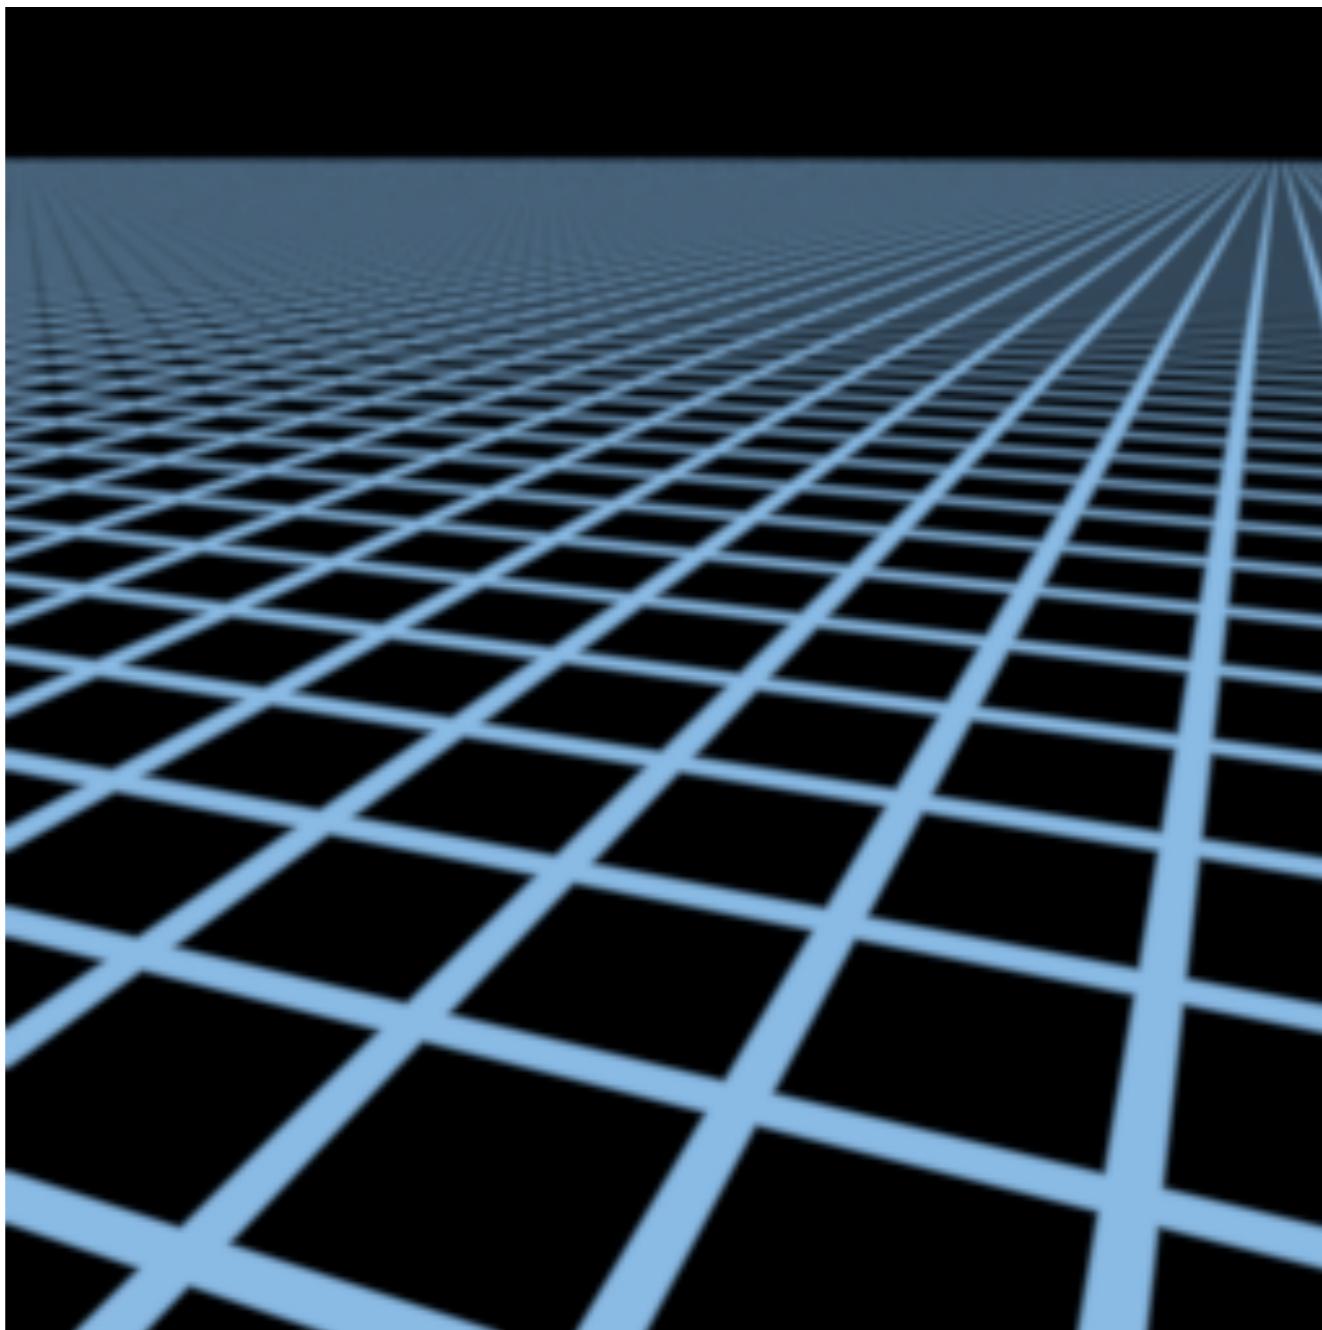

Trilinear filtering: visualization of continuous D

Mipmap Limitations

Point sampling

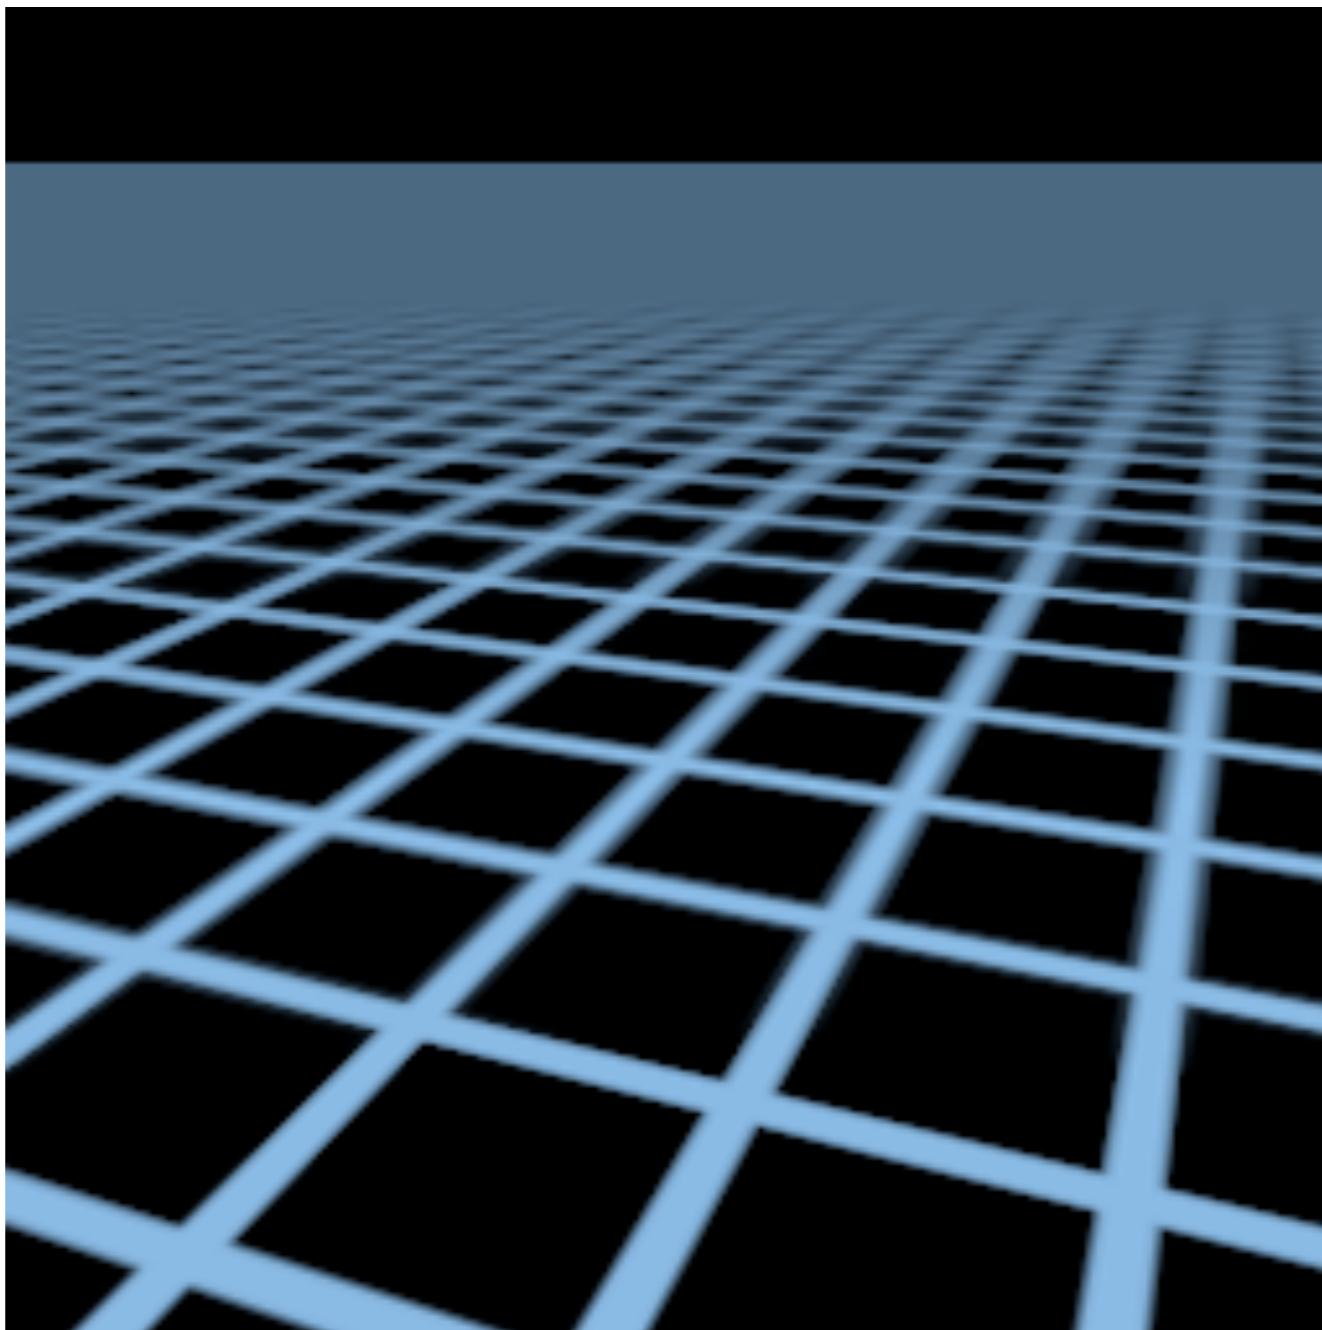

Mipmap Limitations

Supersampling 512x (assume this is correct)

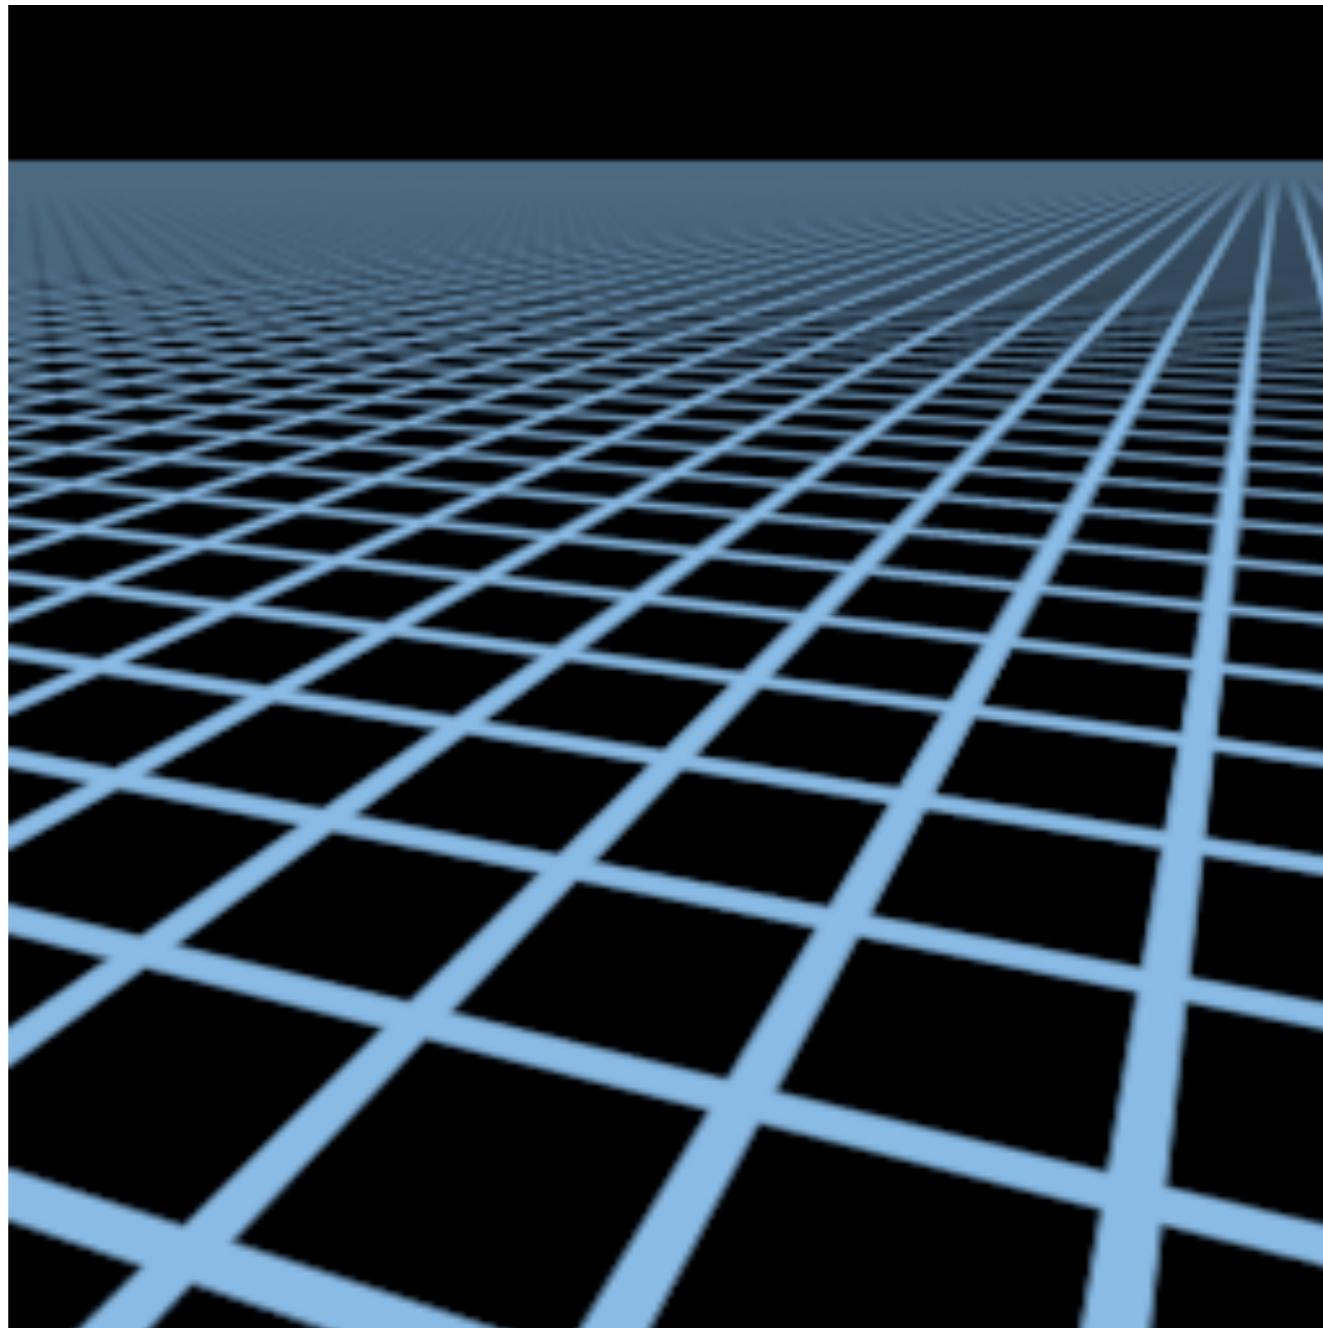

Mipmap Limitations

Overblur
Why?

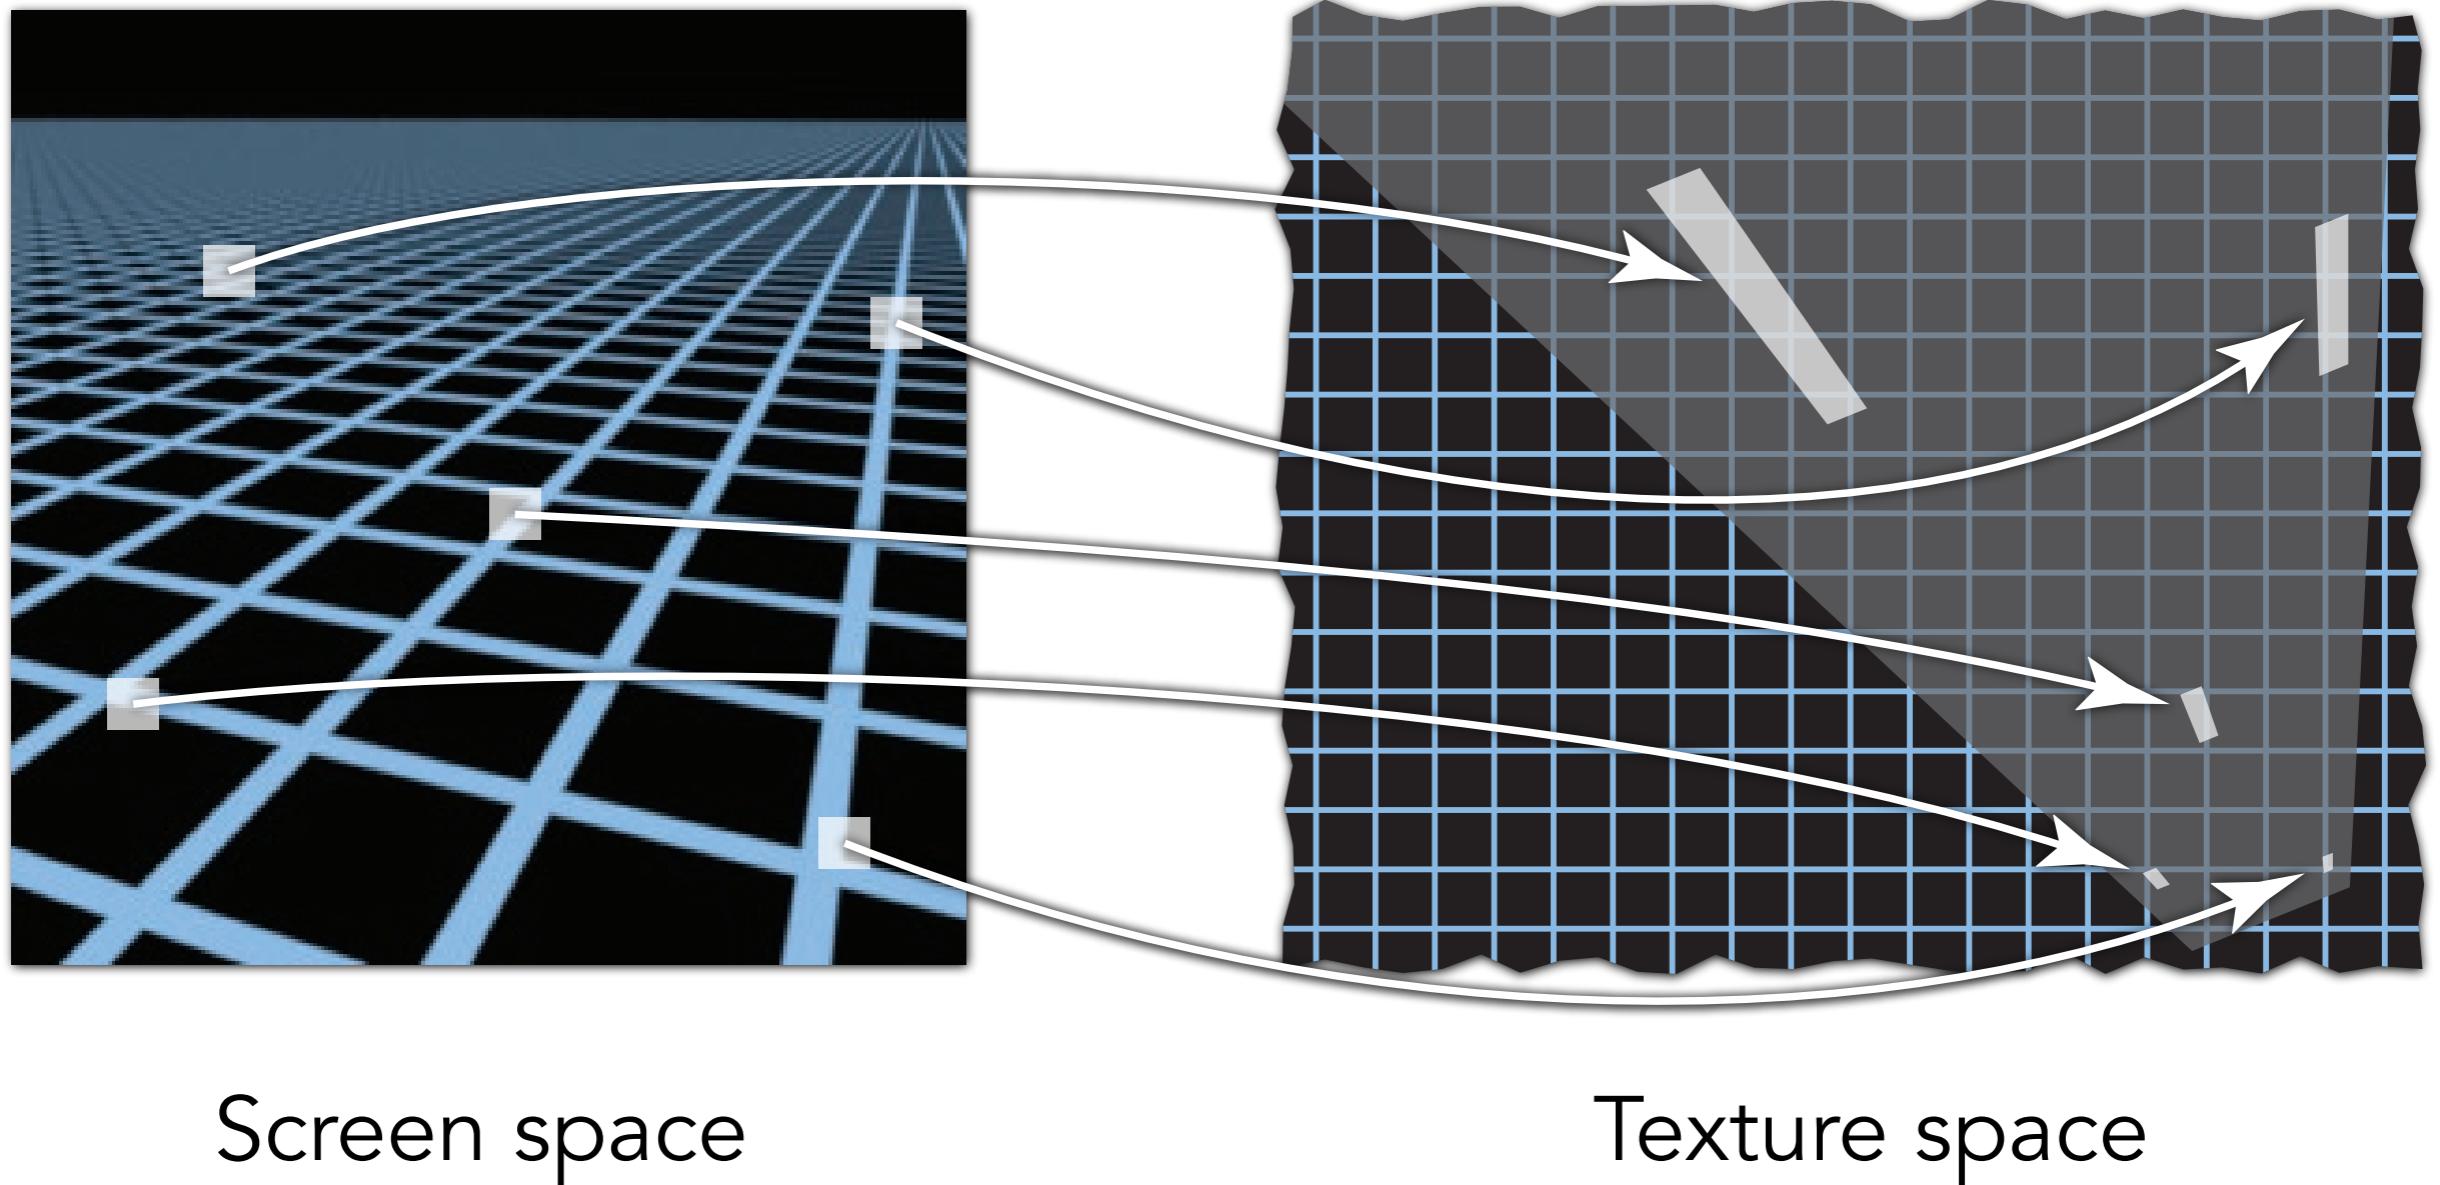

Mipmap trilinear sampling

Anisotropic Filtering

Better than Mipmap!

Irregular Pixel Footprint in Texture

Anisotropic Filtering

Ripmaps and summed area tables

- Can look up **axis-aligned rectangular zones**
- Diagonal footprints still a problem

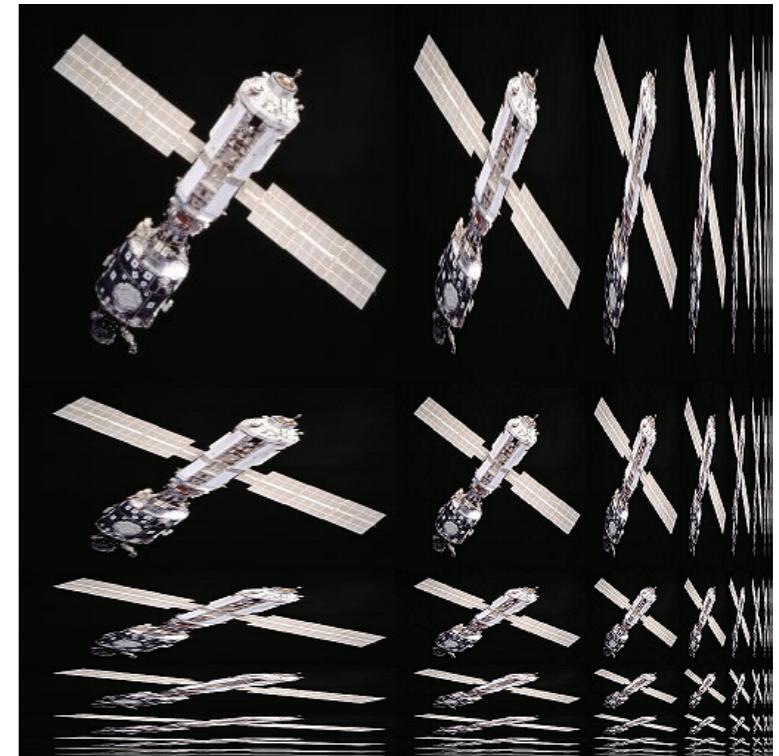

Wikipedia

Anisotropic Filtering

Ripmaps and summed area tables

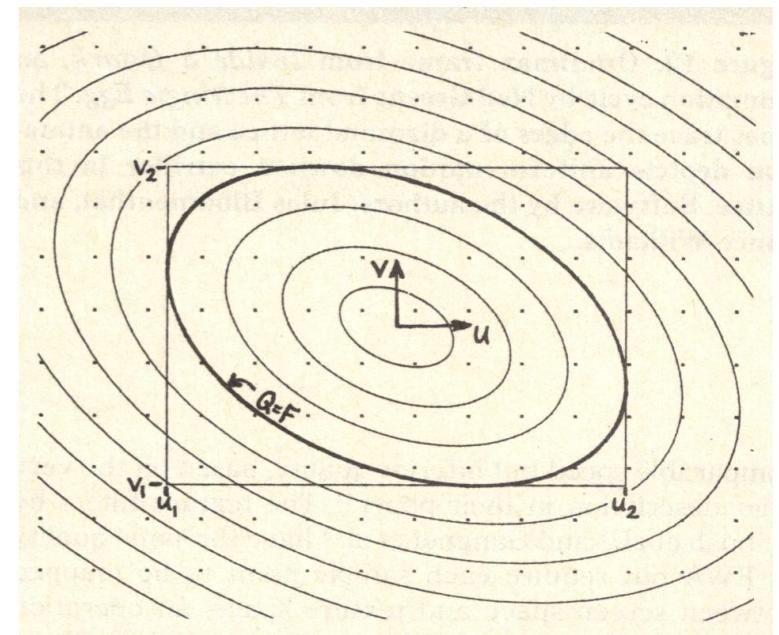

- Can look up axis-aligned rectangular zones
- Diagonal footprints still a problem

Wikipedia

EWA filtering

- Use multiple lookups
- Weighted average
- Mipmap hierarchy still helps
- Can handle irregular footprints

Greene & Heckbert '86

Thank you!

(And thank Prof. Ravi Ramamoorthi and Prof. Ren Ng for many of the slides!)
